

# Ghana - Agribusiness Centers Impact Evaluation

**National Opinion Research Center**

Report generated on: March 27, 2019

Visit our data catalog at: <http://microdata.worldbank.org>

# Sampling

## Sampling Procedure

---

The sample was drawn in two stages: first we selected Farmer-Based Organizations (FBOs) to be part of the sample and then we selected a sample of farmers associated to such FBOs. We included up to 10 randomly selected FBOs that are co-owners of the 8 ABCs. Sometimes fewer than 10 FBOs are associated with an ABC, in those case we selected them all. We randomly selected the same number of the non-co-owner FBOs that are located within the 20-miles radius (ITT), as well as FBOs located in the contiguous 10 miles. In the case that there were fewer FBOs we selected them all. In turn, 10 farmers were randomly selected from each FBO's members list. In total we have 2,007 farmer households in our sample.

## Weighting

---

No weights are implemented in this analysis because its objective is not to replicate parameters for a certain population but to evaluate the impact of the intervention.
