Sampling

Sampling Procedure

Le MSP, travers la DSNIS, avait fourni l'ESPK une liste de 12 050 FOSA, l'exclusion des postes de sant (PS). En effet, sur demande du MSP, les PS ont t exclus de la base de sondage finale tant donn qu'ils sont des structures de soins facultatives.

De la liste fournie, 1 412 FOSA ont t slectionnes parchantillonnage probabiliste, raison d'environ 50 FOSA en moyenne par province pour faire partie de l'enquete dans les 26 provinces du pays. La rpartition du nombre exact de FOSA par province tait fonction du poids de la province (nombre global de FOSA).

Questionnaires

Overview

L'EPSS RDC 2017-2018 a utilisé quatre types d'outils de collecte des données, savoir : (1) un questionnaire d'inventaire, (2) un questionnaire pour les prestataires de soins, (3) des questionnaires d'observation pour la CPN, la PF et la consultation des enfants malades âgés de moins de cinq ans, et (4) des questionnaires d'interview de sortie pour la CPN, les clients de la PF et les accompagnateurs d'enfants malades de moins de cinq ans dont les consultations ont été observées.

DATA COLLECTION NOTES

La collecte des données sur toute l'étendue de la RDC a été réalisée par 280 personnes, détentrices d'un diplôme soit de docteur en médecine soit de sciences infirmières. Ces personnes étaient réparties en 70 équipes et chaque équipe était composée d'un chef d'équipe et de trois enquêteurs.

La collecte des données dans la ville de Kinshasa a été totalement couverte avant le déploiement des équipes dans les autres provinces. Elle s'est faite du 16 octobre au 24 novembre 2017. Dans les provinces, la collecte a commencé le 8 janvier 2018 et s'est achevée le 20 avril 2018.

Data Processing

Data Editing

En vue d'assurer le contrôle permanent de la qualité des données, les informations ont été saisies sur le terrain à l'aide des tablettes. Une liste d'erreurs et d'incohérences a été générée par l'application en vue d'une correction avant la transmission des données au serveur central via Internet. Ces fichiers de données ont ensuite été enregistrés, compilés et traités sur un ordinateur central situé à l'ESPK. Les questionnaires papier ont également été acheminés et saisis à l'ESPK. Pour chaque FOSA, les données saisies sur terrain et celles saisies à l'ESPK ont été comparées pour rechercher les discordances éventuelles en vue de leur correction. Un fichier unique de données apurées a été créé à partir de tous les fichiers de toutes les FOSA valides. La saisie, le contrôle et la compilation des données ont été coordonnés par deux informaticiens recrutés à temps plein. Le traitement des données de l'EPSS RDC 2017-2018 a été réalisé à l'ESPK en utilisant le logiciel CPro.
