Overview

ABSTRACT
The survey was conducted in Armenia between December 2019 to August 2020 by the World Bank Group (WBG). The survey covers two cities: Bosaso and Mogadishu . The fieldwork was implemented by ACT Global, the main contractor, in collaboration with MPG Armenia, a survey firm based in Armenia.

The primary objectives of the survey are:

- i) to understand the business demographics of micro-enterprises in the two cities, and
- ii) to describe the environment within which these businesses operate.

A secondary objective of the survey is to provide an estimate of the number of micro-enterprises operating in these cities.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Unit of analysis is establishment. An establishment is a physical location where business is carried out and where industrial operations take place or services are provided. A firm may be composed of one or more establishments. For example, a brewery may have several bottling plants and several establishments for distribution. For the purposes of this survey an establishment must make its own financial decisions and have its own financial statements separate from those of the firm. An establishment must also have its own management and control over its payroll.

Sampling

Sampling Procedure

The sample for 2019 Armenia micro-enterprise survey was selected using stratified random sampling, following the methodology explained in the Sampling Note (https://www.enterprisesurveys.org/content/dam/enterprisesurveys/documents/methodology/Sampling_Note.pdf). Two levels of stratification were used in this country: industry and region. The original sample design with specific information of the industries and regions chosen is described in Appendix C (found in the 'Implementation Report').

Industry stratification was designed in the way that follows: two manufacturing industries (food and other manufacturing) and two services industries (retail and other services). Food (ISIC Rev. 3.1 codes 15), Other Manufacturing (ISIC codes 16-37), Retail (ISIC code 52) and Other Services (ISIC codes 45, 50, 51, 55, 60-64, and 72).

There is no further breakdown by firm size for the micro-enterprise survey for sampling purpose and all firms are classified in to one size group, i.e., (1 to 4 employees).

Regional stratification was done across three regions: Yerevan administrative region, Gyumri Municipality and Vanadzor Municipality.

The sample frame used for this survey consist of listings of firms from three sources: lists of firms from Armenian Export Catalogue, through block enumeration and a list of manufacturing firms from Spyur were obtained and used.

Weighting

To estimate population parameters, weights are applied to survey samples. In surveys design following standard random sampling, selection probability of all units is known before the actual data collection. Hence, weights can be derived as the inverse of selection probability.

Questionnaires

Overview

The main data file is collected using a standardized questionnaire, i.e., the long-form questionnaire. The questionnaire was developed building on previous modules used by the Enterprise Analysis Unit of the World Bank to survey informal businesses and micro-enterprises.
