STUDY TYPE
Enterprise Survey [en/oth]

SERIES INFORMATION
The Future of Business survey is a collaboration between Facebook, the OECD and the World Bank to provide monthly data on the perceptions, challenges, and outlook of online Small and Medium Enterprises (SMEs). It was first launched in 17 countries in February 2016. Now the survey covers 101 countries and includes additional fields related to gender for example. In 2019, the Future of Business survey increased coverage to 97 countries and moved to a bi-annual cadence. Microdata is also available to nonprofits and universities through 'Facebooks Data for Good <https://dataforgood.facebook.com/> program. To request access, please visit the Future of Business Survey <https://dataforgood.facebook.com/dfg/tools/future-of-business-survey> and fill out the data request form.

ABSTRACT
The Future of Business Survey is a new source of information on small and medium-sized enterprises (SMEs). Launched in February 2016, the monthly survey - a partnership between Facebook, OECD, and The World Bank - provides a timely pulse on the economic environment in which businesses operate and who those businesses are to help inform decision-making at all levels and to deliver insights that can help businesses grow. The Future of Business Survey provides a perspective from newer and long-standing digitalized businesses and provides a unique window into a new mobilized economy.

Policymakers, researchers and businesses share a common interest in the environment in which SMEs operate, as well their outlook on the future, not least because young and innovative SMEs in particular are often an important source of considerable economic and employment growth. Better insights and timely information about SMEs improve our understanding of economic trends, and can provide new insights that can further stimulate and help these businesses grow.

To help provide these insights, Facebook, OECD and The World Bank have collaborated to develop a monthly survey that attempts to improve our understanding of SMEs in a timely and forward-looking manner. The three organizations share a desire to create new ways to hear from businesses and help them succeed in the emerging digitally-connected economy. The shared goal is to help policymakers, researchers, and businesses better understand business sentiment, and to leverage a digital platform to provide a unique source of information to complement existing indicators.

With more businesses leveraging online tools each day, the survey provides a lens into a new mobilized, digital economy and, in particular, insights on the actors: a relatively unmeasured community worthy of deeper consideration and considerable policy interest.

KIND OF DATA
Sample survey data [ssd]

UNIT OF ANALYSIS
The study describes small and medium-sized enterprises.

Scope

NOTES
The survey includes questions about: - Perceptions of current and future economic activity - Challenges - Business characteristics - Strategy

Coverage

GEOGRAPHIC COVERAGE
When the survey was initially launched in February 2016, it included 22 countries. The Future of Business Survey is conducted in over 90 countries in every region of the world.

UNIVERSE
The target population consists of SMEs that have an active Facebook business Page and include both newer and longer-standing businesses, spanning across a variety of sectors. With more businesses leveraging online tools each day, the survey provides a lens into a new mobilized, digital economy and, in particular, insights on the actors: a relatively unmeasured community worthy of deeper consideration and considerable policy interest.

Sampling

SAMPLING PROCEDURE

Twice a year in over 97 countries, the Facebook Survey Team sends the Future of Business to admins and owners of Facebook-designated small business pages. When we share data from this survey, we anonymize responses to all survey questions and only share country-level data publicly. To achieve better representation of the broader small business population, we also weight our results based on known characteristics of the Facebook Page admin population. A random sample of firms, representing the target population in each country, is selected to respond to the Future of Business Survey each month.

RESPONSE RATE

Response rates to online surveys vary widely depending on a number of factors including survey length, region, strength of the relationship with invitees, incentive mechanisms, invite copy, interest of respondents in the topic and survey design. Note: Response rates are calculated as the number of respondents who completed the survey divided by the total number of SMEs invited.

DATA COLLECTION MODE

Internet [int]

DATA COLLECTION NOTES

The questionnaire was pretested by the target audience, as well as experts from the area of research interest. Additionally, steps were taken to translate the survey in order to reduce sensitivities to cultural response bias: - Respondents were given the option to respond to the survey in any of fifteen languages native to the countries in which it was conducted. - Translations were done only by native speakers, with two rounds of additional online checks in the context of the survey environment. - Translators were provided with context material for this survey (e.g., the Facebook for Business website) in order to understand the context of the survey. They were also instructed to take the English survey at least two times before starting with the translations. - Translations were discussed in a group in order to ensure a common understanding of questions and items. - The tone (formal vs. informal) of the survey was based on cultural conventions, e.g., Facebook usually uses an informal tone, while in cultures such as the Japanese this is very uncommon and thus a formal tone was used there.

Questionnaires

QUESTIONNAIRES

The survey includes questions about perceptions of current and future economic activity, challenges, business characteristics and strategy. Custom modules include questions related to regulation, access to finance, digital payments, and digital skills. The full questionnaire is available for download.

Data Appraisal

ESTIMATES OF SAMPLING ERROR

Any survey data is prone to several forms of error and biases that need to be considered to understand how closely the results reflect the intended population. In particular, the following components of the total survey error are noteworthy: Sampling error is a natural characteristic of every survey based on samples and reflects the uncertainty in any survey result that is attributable to the fact that not the whole population is surveyed. Other factors beyond sampling error that contribute to such potential differences are frame or coverage error (sampling frame of Page owners does not include all relevant businesses but also may include individuals that don't represent businesses), and nonresponse error. Note that the sample is meant to reflect the population of businesses on Facebook, not the population of small businesses in general. This group of digitized SMEs is itself a community worthy of deeper consideration and of considerable policy interest. However, care

should be taken when extrapolating to the population of SMEs in general. Moreover, future work should evaluate the external validity of the sample. Particularly, respondents should be compared to the broader population of SMEs on Facebook, and the economy as a whole.
