Overview

ABSTRACT
The survey collected data in the Turkish Cypriot Communitiy between December 2018 and June 2019 as a joint project of the European Bank for Reconstruction and Development (EBRD), the European Investment Bank (EIB) and the World Bank Group (WBG).

The objective of the Enterprise Survey is to gain an understanding of what firms experience in the private sector. As part of its strategic goal of building a climate for investment, job creation, and sustainable growth, the World Bank has promoted improving the business environment as a key strategy for development, which has led to a systematic effort in collecting enterprise data across countries. The Enterprise Surveys (ES) are an ongoing World Bank project in collecting both objective data based on firms' experiences and enterprises' perception of the environment in which they operate.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
The primary sampling unit of the study is the establishment. An establishment is a physical location where business is carried out and where industrial operations take place or services are provided. A firm may be composed of one or more establishments. For example, a brewery may have several bottling plants and several establishments for distribution. For the purposes of this survey an establishment must make its own financial decisions and have its own financial statements separate from those of the firm. An establishment must also have its own management and control over its payroll.

Scope

NOTES
The 2019 Turkish Cypriot Communitiy Enterprise Survey covered the following topics:

- General information of a firm/ establishment

- Infrastructure and services

- Sales and supplies

- Management practices

- Degree of competition

- Innovation

- Capacity

- Time use of top manager

- Land and permits

- Crime

- Finance

- Business-Government relations

- Labor

- Business environment

- Performance

- Environment-related aspects

- Exposure to environmental impacts

- Manage and the environment

Sampling

Sampling Procedure

The sample for 2019 Turkish Cypriot Community ES was selected using stratified random sampling, following the methodology explained in the Sampling Note (found under the 'Documentation' tab).

Three levels of stratification were used in this country: industry, establishment size, and region. Industry stratification was designed in the way that follows: one collective manufacturing industry and two services industries (retail and other services). Manufacturing (ISIC Rev. 3.1 codes 15-37), Retail (ISIC code 52) and Other Services (ISIC codes 45, 50, 51, 55, 60-64, and 72).

For the Turkish Cypriot Community ES, size stratification was defined as follows: small (5 to 19 employees), medium (20 to 99 employees), and large (100 or more employees).

The sample frame consisted of listings of firms from two sources: For panel firms, the list of 120 firms from the 2016 EBRD survey was used; and for fresh firms (i.e., firms not covered in 2016), a listing of establishments from Chamber of Commerce and Chamber of Industry, was used.

Note: Refer to Sampling Structure section in "The Turkey Cypriot Community 2019 Enterprise Survey Report' and Appendix C for further details on sampling design with specific information of the industries chosen.

Response Rate

Survey non-response must be differentiated from item non-response. The former refers to refusals to participate in the survey altogether whereas the latter refers to the refusals to answer some specific questions. Enterprise Surveys suffer from both problems and different strategies were used to address these issues.

Item non-response was addressed by two strategies:
a- For sensitive questions that may generate negative reactions from the respondent, such as corruption or tax evasion, enumerators were instructed to collect the refusal to respond (-8) as a different option from don't know (-9).

b- Establishments with incomplete information were re-contacted in order to complete this information, whenever necessary. However, there were clear cases of low response:

The number of interviews per contacted establishments was 30.0%.

Weighting

Since the sampling design was stratified and employed differential sampling, individual observations should be properly weighted when making inferences about the population. Under stratified random sampling, unweighted estimates are biased unless sample sizes are proportional to the size of each stratum. With stratification the probability of selection of each unit is, in general, not the same. Consequently, individual observations must be weighted by the inverse of their probability of selection (probability weights or pw in Stata.)

Special care was given to the correct computation of the weights. It was imperative to accurately adjust the totals within each region/industry/size stratum to account for the presence of ineligible units (the firm discontinued businesses or was unattainable, education or government establishments, no reply after having called in different days of the week and in different business hours, no tone in the phone line, answering machine, fax line, wrong address or moved away and could not get the new references). The information required for the adjustment was collected in the first stage of the implementation: the screening process. Using this information, each stratum cell of the universe was scaled down by the observed proportion of ineligible units within the cell. Once an accurate estimate of the universe cell (projections) was available, weights were computed using the number of completed interviews.

Data Collection Notes

The survey was implemented following a 2-stage procedure. Typically, first a screener questionnaire was applied over the phone to determine eligibility and to make appointments. Then a face-to-face interview took place with the Manager/Owner/Director of each establishment. However, sometimes the phone numbers were unavailable in the sample frame, and thus the enumerators applied the screeners in person. Interviews were conducted using Computer-assisted personal interviewing (CAPI) in Turkey.
