### VERSION DESCRIPTION

Datasets are from surveys (on-going) by the AGF India team on COVID-19 socio-economic impacts in rural India. The current version includes data from the second round (of three) of state-representative surveys across six Indian states, and they cover indicators related to agriculture, migration, rural labour markets, consumption patterns, access to relief and healthcare.

## Overview

---

### ABSTRACT

An effective policy response to the economic impacts of the COVID-19 pandemic requires an enormous range of data to inform the design and response of programs. Public health measures require data on the spread of the disease, beliefs in the population, and capacity of the health system. Relief efforts depend on an understanding of hardships being faced by various segments of the population. Food policy requires measurement of agricultural production and hunger. In such a rapidly evolving pandemic, these data must be collected at a high frequency. Given the unexpected nature of the shock and urgency with which a response was required, Indian policymakers needed to formulate policies affecting India's 1.4 billion people, without the detailed evidence required to construct effective programs. To help overcome this evidence gap, the World Bank, IDinsight, and the Development Data Lab sought to produce rigorous and responsive data for policymakers across six states in India: Jharkhand, Rajasthan, Uttar Pradesh, Andhra Pradesh, Bihar, and Madhya Pradesh.

### KIND OF DATA

## Scope

---

### NOTES

The COVID-19-Related Shocks Surveys in Rural India cover the following subjects:

1. Agriculture: COVID-19-related changes in price realisation, acreage decisions, input expenditure, access to credit, access to fertilisers, etc.
2. Income and consumption: Changes in wage rates, employment duration, consumption expenditure, prices of essential commodities, status of food security etc.
3. Migration: Rates of in-migration, migrant income and employment status, return migration plans etc.
4. Access to relief: Access to in-kind, cash and workfare relief, quantities of relief received, and constraints on the access to relief.
5. Health: Access to health facilities and rates of foregone healthcare, knowledge of COVID-19 related symptoms and protective behaviours.

## Sampling

### Sampling Procedure

---

The samples for these surveys were drawn from surveys and impact evaluations previously conducted by the World Bank, the Ministry of Rural Development, India and IDInsight. A detailed note on the sampling frames is available for download.

### Deviations from Sample Design

---

Details will be made available after all rounds of data collection and analysis is complete.

### Response Rate

---

~46%. The response rate does not include attempts made to invalid numbers. There were 972 such numbers in the sample. The response rate includes the 443 partially completed surveys.

### Weighting

---

Details will be made available after all rounds of data collection and analysis is complete.

# Questionnaires

## Overview

---

The survey questionnaire consists of the following modules:

- Module 0: Introduction
- Module 1: Agriculture
- Module 2: Migration
- Module 3: Consumption
- Module 4: Labour and Income
- Module 5: Access to Relief
- Module 6: Health

## Data Collection

### Data Collection Dates

---

Start	End	Cycle
2020-07-19	2020-07-23	Round 2

### Data Collection Mode

---

Computer Assisted Telephone Interview [cati]

### Data Collection Notes

---

Data were collected using telephonic surveys (CATI). Sampling frames have been drawn from previous surveys and have been documented in the "r2\_sampling\_frame\_description.pdf". A final note on data collection will be developed and made available after all 3 rounds of data collection have been completed.

### Questionnaires
