### STUDY TYPE

Socio-Economic/Monitoring Survey [hh/sems]

### SERIES INFORMATION

Georgia is emerging from the COVID-19 crisis, but the pace of recovery may be different across space and sociodemographic groups. In addition, the war against Ukraine and sanctions on Russia is expected to hit economies around the globe, including Georgia. These profound impacts of the crises underscore the urgency of timely data and real-time analyses for countries to quickly and effectively mitigate the effects of the shock and lay the groundwork for future resilience. To support the Government emerge resiliently from these crises, the South Caucasus Poverty and Equity team at the World Bank has collaborated with various partners to collect series of high-frequency phone surveys (HFPSs) that can be used widely to monitor the evolution of the crises and its impacts on households and firms. These data and related materials are publicly available.

Partnering with the Swedish International Development Cooperation Agency (Sida) and Caucasus Research Resource Centers (CRRC), the South Caucasus team in the Poverty and Equity Global Practice at the World Bank conducted a series of COVID-19 Georgia High Frequency Survey to monitor the impact of COVID-19 on households in Georgia. The first wave was collected in Dec 2020, followed by wave 2 collected in Jan/Feb 2021, wave 3 in March 2021, and the fourth wave was collected in June 2021. The fifth round was collected in March 2022, the sixth round in May 2022, the seventh round in September 2022, and the eighth round in December 2022.

### ABSTRACT

Having reliable, timely data on poverty and inequality is critical to assess the distributional impact of and recovery from COVID-19 and high inflation on households and to make near-real time evidence-based strategic decisions. Partnering with the Swedish International Development Cooperation Agency (Sida) and Caucasus Research Resource Centers (CRRC), the South Caucasus team in the Poverty and Equity Global Practice at the World Bank conducted a series of Georgia High Frequency Survey to monitor the impact of these events on households in Georgia. This eighth round of the survey is augmented by including questions on the impact of high inflation, disruption in employment and schooling, concerns over environmental risks, and access to health services during the COVID-19 pandemic.

## Sampling

## SAMPLING PROCEDURE

The survey is based on phone-interviews with application of Computer Assisted Telephone Interviews (CATI) and random digit dialing (RDD). The sampling frame is representative of the national and rural/urban/Tbilisi population. Around 2000 valid interviews were concluded in each round with response rates around 40%.

## RESPONSE RATE

Response rates were around 40%.

## WEIGHTING

Weights were adjusted by post-stratification. Details are provided in the CRRC Fieldwork Report COVID 19 WB.

## Questionnaires

## QUESTIONNAIRES

The COVID-19 Georgia High Frequency Survey (GHFS) 2020-22

Wave 1 comprises following modules:

- 1- Household Identification,
- 2- Household Demographics,
- 3- Assets and Access to Internet,
- 4- Prevalence of COVID-19,
- 5- Distance Learning,
- 6- Employment Dynamics,
- 7- Income,
- 8- Food Security,
- 9- Shocks and Coping Strategies,
- 10- Vaccine,
- 11- Perception.

In waves 2, 3, and 4, module on remittances was added. In wave 4, module on shocks and coping strategies was dropped, but question on job disruption was added. In waves 5 and 6, modules on inflation impact and time use were added. Questions on income and remittances were dropped. In wave 7, questions on income and remittances were brought back. In wave 8, questions on the perception of environmental risks, perception of the country's development, and health services accessibility during the COVID-19 pandemic were added.

## Data Processing

### DATA EDITING

Data cleaning was carried out to identify and, where possible, correct inconsistencies. In addition, open-ended questions with textual responses were recoded so that these answers matched numeric codes. With CATI, the cleaning process was straightforward: pre-programmed questionnaire forms helped to eliminate ambiguous codes from being entered in the dataset. Also, the form did not accept errors related to selecting more values than permitted in the questionnaire. Additional protocols for data cleaning are summarized in the CRRC Fieldwork Report.
