Overview

ABSTRACT
UNHCR requested REACH to facilitate a JMSNA, with support from ECHO with the objective of establishing a comprehensive evidence-base of multi-sectoral needs among refugee and host community populations across all existing refugee settlements nationwide (30) and the districts hosting these settlements (11). The report also incorporates findings on needs among refugee and host community populations living in vulnerable urban neighborhoods of Kampala.

The findings and analysis from this report has been used to support the Refugee Response Plan for 2019-2020, along with informing other programmatic, strategic, and operational decision making for the humanitarian response coordinators and partner organizations. The JMSNA aims to compare humanitarian needs across population groups and locations in order to highlight groups and areas of most concern. Consequently, it aims to answer the following research question: what is the situation for specific population groups (refugees residing within refugee settlements and host community populations) in Uganda regarding health and nutrition; water, sanitation, and hygiene (WASH); livelihoods, environment and energy; shelter, site planning, and non-food items; education; and food security.

The JMSNA process in Uganda began in February 2018, with REACH facilitating the research design under the auspices of UNHCR and Uganda's Office of the Prime Minister (OPM). Through the inter-agency coordination group and other coordination mechanisms, a collaborative tool was developed with input from many partners. Data collection was conducted from 2 April to 14 July, 2018, in all 30 refugee settlements. Data collection was carried out in Kampala from 6 to 16 March and 28 March to 9 April to assess the needs of refugee and host community households in vulnerable urban neighborhoods of Kampala.
