Version

VERSION DESCRIPTION
v2.1: Edited, anonymous dataset for public distribution. Third wave.

PRODUCTION DATE
2020-11-30

Overview

ABSTRACT
The participants of this phone interview were identified using mixed methods. Stratified random sampling were adopted for PoCs based in Kakuma, Kalobeyei, Dadaab and urban areas. While a census was used for all PoCs who were 18+ years amongst the Shona community; this cohort forms 48.6% of the enumerated population of the Shona people. The survey was conducted at two levels; household and individual.

Sampling

Sampling Procedure

Individuals (18 years and above) with active phone numbers were randomly selected from UNHCR database for each of the four camp sites - Kakuma, Kalobeyei, Dadaab and Urban. For Shona, we took the sample from the Socioeconomic Assessment survey. Due to the smaller sample size of the Shona population (782), we use everybody in the sample. Those selected individuals from each site were sent an SMS, stating that they have been randomly selected to participate in a socio-economic impact of COVID-19 survey.

Weighting

Already computed; see the database

Questionnaires

Overview

The questionnaire included 12 sections

Section 1: Introduction

Section 2: Household background

Section 3: Travel patterns and interactions

Section 4: Employment

Section 5: Food security

Section 6: Income Loss

Section 7: Transfers

Section 8: Subjective welfare (50% of sample)

Section 9: Health

Section 10: COVID Knowledge

Section 11: Household and Social Relations (50% of sample)

Section 12: Conclusion

Data Collection

Data Collection Dates

Start	End	Cycle
2020-05-14	2020-07-07	1
2020-07-16	2020-09-18	2
2020-09-28	2020-11-30	3

Data Collection Mode

Computer Assisted Telephone Interview [cati]

Data Collection Notes

PRE-LOADED INFORMATION: Basic household information was pre-loaded in the CATI assignments for each enumerator. The information, for example the household's location, household head name, phone numbers et cetera, was used to help enumerators call and identify the target households. The list of individuals from the KIHBS CAPI pilot and their basic characteristics were uploaded which helped maintain the panel of individuals and ensured the status of each individual in the wave 2 survey.

RESPONDENTS: The COVID-19 RRPS had ONE RESPONDENT per household. The target respondent was defined as the primary male or female from 2015/16 KIHBS CAPI Pilot. They were randomly chosen where both existed to maintain gender balance. If the target respondent was not available for a call, the field team spoke to any adult currently living in the household of the target respondent. If the target respondent was deceased, the field team spoke to any adults that lived with the target respondent in 2015/16. Finally, if the household from 2015/16 split up, we targeted anyone in the household of the target respondent but did not survey a household member that no longer lives with the target respondent. For the sample based on Random Digit Dialing, the target respondent was the owner the phone number that was randomly selected.

Questionnaires

The questionnaire included 12 sections

Section 1: Introduction

Section 2: Household background

Section 3: Travel patterns and interactions

Section 4: Employment

Section 5: Food security

Section 6: Income Loss

Section 7: Transfers

Section 8: Subjective welfare (50% of sample)

Section 9: Health

Section 10: COVID Knowledge

Section 11: Household and Social Relations (50% of sample)

Section 12: Conclusion
