Overview

ABSTRACT

The Vulnerability Assessment for Syrian Refugees in Lebanon Arsaal, was conducted jointly by the United Nations Children's Fund (UNICEF), United Nations High Commissioner for Refugees (UNHCR) and the United Nations World Food Programme (WFP, dataviz.vam.wfp.org). Now in its seventh year, the Vulnerability Assessment of Syrian Refugees in Lebanon (VASyR) assesses a representative sample of Syrian refugee families to identify changes and trends in their situation. The Government of Lebanon estimates that the country hosts 1.5 million of the 6.7 million Syrians who have fled the conflict since 2011 (including nearly one million registered with UNHCR as of end of September 2019). VASyR Arsaal is an addition to the 2019 VASyR, containing a representative sample of Syrian Refugee households in Arsaal.

Sampling

Sampling Procedure

The sample includes 328 Syrian refugee households, and aims to be representative of the Syrian refugee families in Arsaal. A two-stage cluster approach was adopted using the sampling frame of the total number of Syrian refugees known to UNHCR. Using the “30x7” two stage cluster scheme, originally developed by the World Health Organization, 30 clusters per geographical area and seven households per cluster are used to provide a precision of +/- 10 percentage points. Arsaal was selected due to its specific situation which differs from other refugee hosting communities.

Questionnaires

Data Processing

Data Editing

After the completion of data collection, raw data was shared with the VASyR Core Group to review inconsistencies and mistakes that could not be identified during the collection phase. Some of these errors required calling households back to validate and correct the data collected. Each agency was asked to provide the team in charge of clean-up with a list of identified issues and recommendations on how to proceed with the clean-up. A copy of the original raw data was saved. Any modification to the data was scripted in SQL providing a step by step audit trail from the raw data leading to the final dataset used for analysis.
