Data Appraisal

Other forms of Data Appraisal

Limitations of the research:

1. The relative likelihoods of alternative storm surge scenarios have not been assessed in this research. Following Nicholls et al (2007), a homogeneous future increase of 10% in extreme water levels during tropical storms is assumed. In all likelihood, regions of the world may experience a smaller increase and others a larger increase. Better local modeling of the impact of climate change on storm intensities (with the support of hurricane generator models) is needed to better forecast changes in storm surges.
2. Among the 84 developing countries included in this analysis, our estimation is restricted to coastal segments where historical storm surges have been documented.
3. The absence of a global database on shoreline protection has prevented us from incorporating the effect of existing protection measures (e.g., sea dikes) on exposure estimates.
4. Lack of spatially disaggregated secondary information on indicators prevented us from including small islands in this analysis.
5. The impacts of intensification of storm surges and SLR have been assessed using existing population, socio-economic conditions and patterns of land use, rather than attempting to predict their future states. Human activity is generally increasing more rapidly in coastal areas and thus the impacts of storm surges will be more pronounced in these areas. This effect is countered by adaptation measures (e.g., sea dikes), which we also do not attempt to estimate in this exercise. Adaptation measures from the purely technological (e.g., coastal embankments), to coastal-zone management (e.g., land-use planning, regulations, relocation) are often context, location and community-specific. Thus in our analysis, we refrain from generalizing any adaptive measures across our sub-set of developing countries.

Width: 8	Minimum: 3
Decimals: 2	Maximum: 55180
Range: 1.1-840	Mean: 1839.3
	Standard deviation: 6551.9

URBZ2 over URBCOAST (V8)

File: Urban area

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 5	Minimum: 4.2
Decimals: 2	Maximum: 88.2
Range: 4.2-88.2	Mean: 28.2
	Standard deviation: 12.8

URBZ1+Z2 over URBCOAST (V9)

File: Urban area

Overview

URBZ1+Z2 over URBCOAST (V9)

File: Urban area

Type: Continuous
Format: numeric
Width: 5
Decimals: 2
Range: 8.3-94.1

Valid cases: 90
Invalid: 0
Minimum: 8.3
Maximum: 94.1
Mean: 36.9
Standard deviation: 14.4

% increase in surge zone with CC (increasein)

File: Urban area

Overview

Type: Continuous
Format: numeric
Width: 6
Decimals: 2
Range: 5.6-130.1

Valid cases: 90
Invalid: 0
Minimum: 5.6
Maximum: 130.1
Mean: 35.2
Standard deviation: 19.5

Country name (Countryname)

File: Wetlands

Overview

Type: Discrete	Valid cases: 90
Format: character	Invalid: 0
Width: 31	

Km of coastline (DIVA_Coasline)

File: Wetlands

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 9	Minimum: 44.2
Decimals: 2	Maximum: 269596
Range: 13.803-44261.277	Mean: 8986.5
	Standard deviation: 32040.6

Literal question

length of coastline from DIVA database (km)

Total wetland area (km2) (GLWD1TOT)

File: Wetlands

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 7	Minimum: 0
Decimals: 0	Maximum: 4388959
Range: 0-4388959	Mean: 146298.6
	Standard deviation: 517582.2

Literal question

total wetland area from Global Lakes and Wetlands database (excluding lakes and rivers) (km)

Area of coastal wetland (km2) (GLWD1COAST)

File: Wetlands

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 9	Minimum: 0
Decimals: 2	Maximum: 663930
Range: 0-84735	Mean: 22131
	Standard deviation: 77354.9

Literal question

area of wetlands in coastal zone (km)

Wetlands in current storm surge zone (GLWD1Z2)

File: Wetlands

Overview

Wetlands in current storm surge zone (GLWD1Z2)

File: Wetlands

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 9	Minimum: 0
Decimals: 2	Maximum: 152767
Range: 0-13227	Mean: 5092.2
	Standard deviation: 17606.1

Literal question

area of wetlands in z2 (km)

Increment in exposure of wetlands with climate change

(GLWD1Z1)

File: Wetlands

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 8	Minimum: 0
Decimals: 2	Maximum: 45741
Range: 0-4360	Mean: 1524.7
	Standard deviation: 5285

Literal question

area of wetlands in z1 (km)

Wetlands in surge zone with climate change (GLWD1Z1Z2)

File: Wetlands

Overview

Type: Continuous	Valid cases: 90
Format: numeric	Invalid: 0
Width: 9	Minimum: 0
Decimals: 2	Maximum: 198508
Range: 0-939	Mean: 6616.9
	Standard deviation: 22880.7

GLWDZ2 over GLWD1COAST (GLWDZ2)

File: Wetlands

Overview

Type: Continuous	Valid cases: 89
Format: numeric	Invalid: 1
Width: 6	Minimum: 0
Decimals: 2	Maximum: 100
Range: 0-100	Mean: 30.8
	Standard deviation: 21.1

GLWDZ1+Z2 over GLWD1COAST (GLWDZ1Z2)

File: Wetlands

Overview

GLWDZ1+Z2 over GLWD1COAST (GLWDZ1Z2)

File: Wetlands

Type: Continuous
Format: numeric
Width: 6
Decimals: 2
Range: 0-100

Valid cases: 89
Invalid: 1
Minimum: 0
Maximum: 100
Mean: 37.8
Standard deviation: 21.4

% increase in surge zone with CC (increasein)

File: Wetlands

Overview

Type: Continuous
Format: numeric
Width: 6
Decimals: 2
Range: 2.1-339.1

Valid cases: 85
Invalid: 5
Minimum: 2.1
Maximum: 339.1
Mean: 40.7
Standard deviation: 49.4

Sea-level rise and storm surges : a comparative analysis of impacts in developing countries

Title Sea-level rise and storm surges : a comparative analysis of impacts in developing countries

Author(s) Susmita Dasgupta Benoit Laplante Siobhan Murray David Wheeler

Date 2009-04-01

An increase in sea surface temperature is evident at all latitudes and in all oceans. The current understanding is that ocean warming plays a major role in intensified cyclone activity and heightened storm surges. The vulnerability of coastlines to intensified storm surges can be ascertained by overlaying Geographic Information System information with data on land, population density, agriculture, urban extent, major cities, wetlands, and gross domestic product for inundation zones likely to experience more intense storms and a 1 meter sea-level rise. The results show severe impacts are likely to be limited to a relatively small number of countries and a cluster of large cities at the low end of the international income distribution.
