### Version

#### VERSION DESCRIPTION

Version 1 (November 2021). Edited, anonymous dataset for public distribution.

## Overview

#### ABSTRACT

To support the urban poor during the COVID-19 crisis, the UK government provided a monthly Cash Transfer (CT) of 4,000 Kenyan Shillings (KSH) (or £27) to approximately 52,000 vulnerable people living in informal settlements in Nairobi and Mombasa over a period of three months. The COVID-19 CT was implemented by a consortium led by GiveDirectly, and the monthly stipend was paid using mobile money transfers, with the first transfers taking place from October 2020. The CT was designed to support beneficiaries to buy food or meet other high-priority needs-such as purchasing water, paying for medical care, or making rent payments as well as to reduce the use of negative coping strategies (e.g., selling assets, borrowing money).

OPM was contracted to conduct the monitoring and evaluation of the COVID-19 CT. The main objective of this evaluation was to determine whether, and to what extent, the emergency COVID-19 CT had a positive effect on its target population in informal urban settlements in Kenya. The evaluation also provided an assessment of the implementation parameters and mechanisms adopted as part of the design and delivery of the COVID-19 CT.

To fulfil these aims, the evaluation was structured around two separate components-an impact evaluation and a process review-and drew on multiple research methods through a mixed methods research framework. The objective of the quantitative impact evaluation was to assess whether the COVID-19 CT has had an impact on its beneficiaries, and to quantify the scale of any effect detected. This estimation of impact was based on a longitudinal non-experimental design, focusing on a panel of beneficiaries interviewed at three points in time (baseline - prior to the intervention, midline, and endline - post-intervention) over the course of the implementation period. All quantitative data collection took place remotely using Computer-Assisted Telephone Interview (CATI) software.

#### UNITS OF ANALYSIS

Individuals

Households

#### TOPICS

Topic	Vocabulary	URI
Demographic characteristics of beneficiaries		
Attitudes and Practices Regarding COVID-19		
Employment status of the COVID-19 CT recipient		
Other household level Income Sources		
Food security		
Coping Strategies		
Access to Safety Nets		

## KEYWORDS

Cash Transfer (CT), Poverty, Food Security, Livelihoods, Safety Nets, COVID - 19, Resilience, Kenya, Urban

## Coverage

## GEOGRAPHIC COVERAGE

Nairobi and Mombasa in Kenya

## UNIVERSE

The study population consists of individuals included in the lists of enrolled beneficiaries covered by Give Directly for the COVID-19 CT.

## Sampling

### Sampling Procedure

---

The evaluation team implemented a stratified one-stage probability sampling strategy for the selection of survey respondents from the individuals included in the lists covered by Give Directly for the COVID-19 CT. The goal was to select at baseline a sample of 1,000 eligible individuals who would receive the COVID-19 CT, which would then be interviewed by the evaluation team at baseline, midline, and endline.

The sampling strategy considered the following process:

1) The sample was drawn once the COVID-19 CT beneficiaries were considered as enrolled into the intervention. After discussions with Give Directly, it was decided that an individual was considered a future COVID-19 CT recipient when he/she had responded to the short SMS-based survey delivered by Give Directly.

2) The sample was drawn in two separate batches. The first batch of recipients comprised 6,838 vulnerable individuals from informal settlements in Nairobi, while the second batch contained 1,596 vulnerable individuals from Mombasa. We sampled the same number of beneficiaries from the first and second batches (500 individuals from each batch).

3) Explicit stratification was first applied based on the geographical location of the COVID-19 CT recipient. This entailed that we sample 500 individuals from Nairobi from the first batch, and 500 from Mombasa from the second batch. This allowed us to disaggregate our quantitative findings between Nairobi and Mombasa, and produce informative descriptive and regression analyses for each of the two cities included in the intervention.

4) Implicit stratification was then applied based on the following categorical variables: i) local partner from which the eligible beneficiary was selected, and ii) gender of the COVID-19 CT recipient. The goal of this stratification process was to enhance the representativeness of our sample in terms of these variables, so that our evaluation sample resembled as much as possible the distribution of these characteristics in the target population (i.e. the list of beneficiaries of the COVID-19 CT used as sampling frame for our sample).

5) We did not cluster our survey respondents. Apart from spill-over effect issues, which were not a concern due to the lack of a counterfactual in our methodological approach, this is normally a logistical necessity for in-person surveys. This was not an issue either, given the remote nature of the data collection process.

6) Extensive replacement lists were created to maximise efficiency during survey implementation without sacrificing representativeness of the sample. A detailed replacement protocol was elaborated, which took into account the stratification process described above.

Given the longitudinal nature of the evaluation, the same baseline respondents were tracked and re-interviewed at midline and endline so as to create a panel of survey respondents. The final baseline quantitative survey sample achievement is shown below, including the distribution by county

#### Sample achievement

##### Baseline Survey

Nairobi 500

Mombasa 500

Total 1,000

##### Midline Survey

Mombasa 489

Total 972

##### Endline Survey

Nairobi 463

Mombasa 478

Total 941

## Weighting

---

Post-stratification weights were used to adjust the distribution of our study sample between Nairobi and Mombasa to the frequency distribution between the two counties in the target population. Post-stratification weights are structural adjustment weights that modify the structure of the sample to resemble the structure of the target (reference) population. This weighting approach works by adjusting estimates that come from a sample frequency distribution to the frequency distribution of the target population.

Table 2 below shows how the weight was constructed to adjust the equal distribution in our sample to the unequal distribution in the target population (as defined by the sampling frame used to draw our sample) between the two counties of Nairobi and Mombasa.

Table 2 Weight construction

County	Target Population	Sample	Ratio	Weight
Nairobi	31,601	500	0.015822	63.2020
Mombasa	5,778	500	0.086535	11.5560
Total	37,379	1000		

In more technical terms, post-stratification weighting is operationalised as follows:

$$W_{j\text{pstr}} = 1/P_j$$

where  $P_j$  is the ratio (proportion/probability) that the stratum  $j$  represents in the target population. These strata are commonly defined in terms of demographic and geographical categories and are defined in this study as the two counties of Nairobi and Mombasa.

All of the units (COVID-19 CT beneficiaries) belonging to the same stratum (either Nairobi or Mombasa county) receive the same weight. The post-stratification weight is then used to align the different sample structure to the target population in the quantitative analysis.

Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What did you use the money for? 96 = Other (use\_typec96)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 10  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

Other usage (use\_typec96o)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: character  
Width: 24

Valid cases: 20  
Invalid: 0

Which of these is the main one? (use\_type\_m)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 39  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

How did you spend the money? (use\_how)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 16  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What is the main activity of the business or organisation in which you are curre (emp\_sec\_ml)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric

Range: -999-10

Valid cases: 941  
Invalid: 0

In your main work, do you currently work: (emp\_type\_ml)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 8  
Decimals: 0  
Range: -999-6

Valid cases: 941  
Invalid: 0

What day of the week will be best to call again? 1 = Monday  
(future\_dayc1)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 10  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What day of the week will be best to call again? 2 = Tuesday  
(future\_dayc2)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
Format: numeric  
Width: 10  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What day of the week will be best to call again? 3 = Wednesday  
(future\_dayc3)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
 Format: numeric  
 Width: 10  
 Decimals: 0  
 Range: -999-2147483625

Valid cases: 941  
 Invalid: 0

What day of the week will be best to call again? 4 = Thursday  
 (future\_dayc4)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
 Format: numeric  
 Width: 10  
 Decimals: 0  
 Range: -999-2147483625

Valid cases: 941  
 Invalid: 0

What day of the week will be best to call again? 5 = Friday  
 (future\_dayc5)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
 Format: numeric  
 Width: 10  
 Decimals: 0  
 Range: -999-2147483625

Valid cases: 941  
 Invalid: 0

What day of the week will be best to call again? 6 = Saturday  
 (future\_dayc6)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
 Format: numeric  
 Width: 10  
 Decimals: 0  
 Range: -999-2147483625

Valid cases: 941  
 Invalid: 0

What day of the week will be best to call again? 7 = Sunday  
 (future\_dayc7)

File: `endline_clean_ns`

#### Overview

Type: Discrete  
 Format: numeric  
 Width: 10  
 Decimals: 0  
 Range: -999-2147483625

Valid cases: 941  
 Invalid: 0

What time of the day will best to call again? 1 = Morning

(future\_timec1)

File: endline\_clean\_ns

#### Overview

Type: Discrete  
Format: numeric  
Width: 10  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What time of the day will best to call again? 2 = Afternoon

(future\_timec2)

File: endline\_clean\_ns

#### Overview

Type: Discrete  
Format: numeric  
Width: 10  
Decimals: 0  
Range: -999-2147483625

Valid cases: 941  
Invalid: 0

What time of the day will best to call again? 3 = Evening

(future\_timec3)

File: endline\_clean\_ns

#### Overview

Type: Discrete  
Format: numeric  
Width: 10
