SERIES INFORMATION
The baseline for Georgia contains a total of 701 interviews (581 standard ES and 120 Micro) conducted from March, 2019 through January, 2020. The follow-up data can be merged with the baseline data sets using variable idstd. The follow-up surveys re-contact all establishments sampled in the standard ES. The dataset contains all observations from the standard ES with the variable eligibilitycode which indicates the outcome after attempting to reach the corresponding firm. Reference to last completed month in data : May. For more information regarding COVID-19 Follow-up surveys, visit https://www.enterprisesurveys.org/en/covid-19

ABSTRACT
As part of the efforts of the World Bank to understand the impact of COVID-19 on the private sector, the Enterprise Analysis unit is conducting a series of follow-up surveys in several countries. These short surveys follow the baseline provided by a recent standard Enterprise Survey (ES) and are designed to provide quick and punctual information on the impact and adjustments Covid-19 has brought about tn the private sector.

Sampling

SAMPLING PROCEDURE
The sampling strategy involves re-contacting all establishments, sampled in the standard ES using stratified random sampling. The total sample target was 701. Sample Frame Source : Completed interviews in the Georgia 2019 ES and Micro ES. For more information on sampling methodology, see
https://www.enterprisesurveys.org/content/dam/enterprisesurveys/documents/methodology/Sampling_Note.pdf

RESPONSE RATE
87.6%

WEIGHTING
The data is representative of the universe of the baseline. The dataset contains three weights variables. The baseline weights are denoted wmedian_ES which are used to compute the indicators on the baseline. To account for non-response due to refusals in the follow-up, Sampling weights are adjusted by cell of Stratification (combination of size, sector, and location). The resulting variable wmedian_COVID, recommended to be used for analysis, assumes unobtainable businesses have discontinued and is used for computing indicators. Resulting variable wweak_COVID assumes unobtainable businesses continue to exist. Confirmed exits are administered a short questionnaire which is also available in the dataset. Figure 1 of the survey report reflects the outcome of attempting to complete the entire sample from the baseline.
