MNG_2020_ES-COVID19-R1_v01_M

Identification

Survey title	Enterprise Survey Follow-up on COVID-19 2020
Survey subtitle	Round 1
Abbreviation or Acronym	ES-COVID19-R1 2020
Study ID	MNG_2020_ES-COVID19-R1_v01_M
Study type	Enterprise Survey [en/oth]

Overview

Abstract	As part of the efforts of the World Bank Group to understand the impact of COVID-19 on the private sector, the Enterprise Analysis unit is conducting follow-up surveys on recently completed Enterprise Surveys (ES) in several countries. These short surveys follow the baseline ES and are designed to provide quick information on the impact and adjustments that COVID-19 has brought about in the private sector.
Kind of Data	Sample survey data [ssd]
Unit of Analysis	Enterprise

Scope

Study notes	The survey covers the following topics: <ul style="list-style-type: none">- Sales- Production- Labor- Finance- Policies- Expectations- Information on permanently closed establishments
-------------	---

Coverage

Country	Mongolia, MNG
Geographic Coverage	National
Universe	The universe of inference is all registered establishments with five or more employees that are engaged in one of the following activities defined using ISIC Rev. 3.1: manufacturing (group D), construction (group F), services sector (groups G and H), transport, storage, and communications sector (group I) and information technology (division 72 of group K).

Producers and Sponsors

Authoring entity/ Primary investigators	World Bank Group
Producers	World Bank Group

Sampling

Sample frame name	Sample frame source: Completed interviews in the Mongolia 2019 ES.
Sampling Procedure	The follow-up surveys re-contact all establishments sampled in the standard ES using stratified random sampling. Total sample target: 360
Response Rate	97.2%

Weighting	The dataset contains three weight variables. The baseline weights are denoted wmedian_ES and are used to compute the indicators that project to the baseline universe (e.g. exit rates). To account for non-response in the follow-up, these sampling weights are adjusted by cell of stratification (combination of size, sector, and location). The resulting variable wmedian_COVID - recommended to be used for analysis and used to compute all other indicators - assumes that businesses that could not be re-contacted (unobtainable) have exited the market. The variable wweak_COVID assumes that unobtainable businesses continue to exist. Establishments that have closed permanently are interviewed using a short questionnaire which is also available in the dataset.
-----------	--

Data Collection

Dates of Data Collection (YYYY/MM/DD)	2020-08-03, 2020-08-15, Round 1
Mode of data collection	Computer Assisted Telephone Interview [cati]
Data Collectors	Independent Research Institute Mongolia

Survey Instrument

Questionnaires	<p>The questionnaire contains the following modules:</p> <ul style="list-style-type: none"> - Control information and introduction - Sales - Production - Labor - Finance - Policies - Expectations - Information on permanently closed establishments - Interview protocol
----------------	--

Data Access

Access Authority	Enterprise Analysis Unit, The World Bank, https://www.enterprisesurveys.org/en/covid-19 , enterprisesurveys@worldbank.org
Citation requirement	<p>The use of this dataset must be acknowledged using a citation which would include:</p> <ul style="list-style-type: none"> - the identification of the Primary Investigator (including country name) - the full title of the survey and its acronym (when available), and the year(s) of implementation - the survey reference number - the source and date of download (for datasets disseminated online) <p>Example:</p> <p>The World Bank. Mongolia Enterprise Survey Follow-up on COVID-19, Round 1 (ES-COVID19-R1) 2020, Ref. MNG_2020_ES-COVID19-R1_v01_M. Dataset downloaded from [URL] on [date].</p>
