TITLE

Enterprise Survey Follow-up on Covid-19 2021, Round 2

COUNTRY/ECONOMY

Name	Country code
Mongolia	MNG

STUDY TYPE

Enterprise Survey [en/oth]

SERIES INFORMATION

The baseline ES for Mongolia contains a total of 360 interviews conducted from January through May, 2019. The follow-up data can be merged with the baseline data set using the variable idstd. The follow-up surveys re-contact all establishments sampled in the standard ES. The dataset contains all observations from the standard ES with the variable eligibilitycode indicating the outcome after attempting to reach the corresponding firm. Variable COV2r1 indicates whether the firm participated in the previous round of the survey, and determines the reference period for some of the questions. Each variable in the dataset has the same reference period across respondents. Reference to last completed month in data : January. For more information regarding the ES follow-up surveys on COVID-19, visit: <https://www.enterprisesurveys.org/en/covid-19>

ABSTRACT

As part of the efforts of the World Bank Group to understand the impact of COVID-19 on the private sector, the Enterprise Analysis unit is conducting follow-up surveys on recently completed Enterprise Surveys (ES) in several countries. These short surveys follow the baseline ES and are designed to provide quick information on the impact and adjustments that COVID-19 has brought about in the private sector.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

Firms

Scope

NOTES

The survey covers the following topics:

- Sales
- Production
- Labor
- Finance
- Policies
- Expectations
- Information on permanently closed establishments

Coverage

Sampling

SAMPLING PROCEDURE

The follow-up surveys re-contact all establishments sampled in the standard ES using stratified random sampling. The total sample target was 360. Sample Frame Source : Completed interviews in Mongolia 2019 ES. For more information on sampling methodology, see

https://www.enterprisesurveys.org/content/dam/enterprisesurveys/documents/methodology/Sampling_Note.pdf

RESPONSE RATE

97.9%

WEIGHTING

The dataset contains three weight variables. The baseline weights are denoted `wmedian_ES` and are used to compute the indicators that project to the baseline Universe (e.g. exit rates). To account for non-response in the follow-up, these sampling weights are adjusted by cell of stratification (combination of size, sector, and location). The resulting variable `wmedian_COVID`— recommended to be used for analysis and used to compute all other indicators — assumes that businesses that could not be re-contacted (unobtainable) have exited the market. The variable `wweak_COVID` assumes that unobtainable businesses continue to exist. Establishments that have closed permanently are interviewed using a short questionnaire which is also available in the dataset. Figure 1 of the survey report reflects the outcome of attempting to re-contact the entire sample from the baseline ES.

Data Collection

DATES OF DATA COLLECTION

Start	End
2021-02-01	2021-02-18

DATA COLLECTION MODE

Computer Assisted Telephone or Web Interviews (CATI/CAWI)

Questionnaires

QUESTIONNAIRES

The questionnaire contains the following modules:

- Control information and introduction
- Sales
- Production
- Labor
- Finance
- Policies
- Expectations
- Information on permanently closed establishments

- Interview protocol
