TITLE
Enterprise Survey Follow-up on Covid-19 2020

COUNTRY/ECONOMY

Name	Country code
Mozambique	MOZ

STUDY TYPE
Enterprise Survey [en/oth]

SERIES INFORMATION
The baseline ES for Mozambique contains a total of 770 (650 interviewed as part of expanded ES and 120 Microenterprises) interviews conducted from June 2018 to January 2019. The follow-up data can be merged with the baseline data set using the variable idstd. The follow-up surveys re-contact all establishments sampled in the standard ES. The dataset contains all observations from the standard ES with the variable eligibilitycode indicating the outcome after attempting to reach the corresponding firm. Reference to last completed month in data : Jun/Jul/Aug/Sept/Oct/Nov/D. For more information regarding the ES follow-up surveys on COVID-19, visit: https://www.enterprisesurveys.org/en/covid-19

ABSTRACT
As part of the efforts of the World Bank Group to understand the impact of COVID-19 on the private sector, the Enterprise Analysis unit is conducting follow-up surveys on recently completed Enterprise Surveys (ES) in several countries. These short surveys follow the baseline ES and are designed to provide quick information on the impact and adjustments that COVID-19 has brought about in the private sector.

KIND OF DATA
Sample survey data [ssd]

UNIT OF ANALYSIS
Firms

Scope

NOTES
The survey covers the following topics:
- Sales
- Production
- Labor
- Finance
- Policies
- Expectations
- Information on permanently closed establishments

Sampling

SAMPLING PROCEDURE
The follow-up surveys re-contact all establishments sampled in the standard ES using stratified random sampling. The total sample target was 770. Sample Frame Source : Completed interviews in the Mozambique 2018 ES, Micro, and Expanded. For more information on sampling methodology, see
https://www.enterprisesurveys.org/content/dam/enterprisesurveys/documents/methodology/Sampling_Note.pdf

RESPONSE RATE
60.6%

WEIGHTING
The dataset contains three weight variables. The baseline weights are denoted wmedian_ES and are used to compute the indicators that project to the baseline Universe (e.g. exit rates). To account for non-response in the follow-up, these sampling weights are adjusted by cell of stratification (combination of size, sector, and location). The resulting variable wmedian_COVID — recommended to be used for analysis and used to compute all other indicators — assumes that businesses that could not be re-contacted (unobtainable) have exited the market. The variable wweak_COVID assumes that unobtainable businesses continue to exist. Establishments that have closed permanently are interviewed using a short questionnaire which is also available in the dataset. Figure 1 of the survey report reflects the outcome of attempting to re-contact the entire sample from the baseline ES.

Computer Assisted Telephone Interviews (CATI)

Questionnaires

QUESTIONNAIRES
The questionnaire contains the following modules:
- Control information and introduction
- Sales
- Production
- Labor
- Finance
- Policies
- Expectations
- Information on permanently closed establishments
- Interview protocol
