Kenya	KEN

STUDY TYPE

Socio-Economic/Monitoring Survey [hh/sems]

SERIES INFORMATION

This dataset contains information from the five waves of the COVID-19 RRPS Household Survey which is part of a five-wave bi-monthly panel survey that targets Kenyan nationals. The same households are interviewed every two months, between May 2020 and June 2021.

ABSTRACT

The participants of this phone interview were identified using mixed methods. Stratified random sampling were adopted for Persons of Concern (POC) to UNHCR based in Kakuma, Kalobeyei, Dadaab and Urban areas. While a census was used for all PoCs who were 18+ years amongst the Shona community; this cohort forms 48.6% of the enumerated population of the Shona people. The survey was conducted at two levels: household and individual.

Sampling

SAMPLING PROCEDURE

Individuals (18 years and above) with active phone numbers were randomly selected from UNHCR database for each of the four camp sites - Kakuma, Kalobeyei, Dadaab and Urban. For Shona, we took the sample from the Socioeconomic Assessment survey. Due to the smaller sample size of the Shona population (782), we use everybody in the sample. Those selected individuals from each site were sent an SMS, stating that they have been randomly selected to participate in a socio-economic impact of COVID-19 survey.

WEIGHTING

Already computed; see the database. Weighting: Cross-Sectional weights For the KNBS and RDD samples, to make the sample nationally representative of the current population of households with mobile phone access, we create weights in two steps.

Step 1: Construct raw weights combining the two national samples: The current population consists of (I) households that existed in 2015/16, and did not change phone numbers, (II) households that existed in 2015/16, but changed phone number, (III) households that did not exist in 2015/16. Abstracting from differential attrition, the weights from the 2015/16 KIHBS CAPI pilot make the KIHBS sample representative of type (I) households. For RDD households, we ask whether they existed in 2015/16, when they had acquired their phone number, and where they lived in 2015/16, allowing us to classify them into type (I), (II) and (III) households and assign them to KIHBS strata. We adjust weights of each RDD household to be inversely

proportional to the number of mobile phone numbers used by the household, and scale them relative to the average number of mobile phone numbers used in the KIHBS within each stratum. RDD therefore gives us a representative sample of type (II) and (III) households. We then combine RDD and KIHBS type (I) households by ex-post adding RDD households into the 2015/16 sampling frame and adjusting weights accordingly. Last, we combine our representative samples of type (I), type (II) and type (III), using the share of each type within each stratum from RDD (inversely weighted by number of mobile phone numbers). Variable: `weight_raw`

Step 2: Scale the weights to population proportions in each county and urban/rural stratum: We use post stratification to adjust for differential attrition and response rates across counties and rural/urban strata. We scale the raw weights from step 1 to reflect the population size in each county and rural/urban stratum as recorded in the 2019 Kenya Population and Housing Census conducted by the KNBS (2019 Kenya Population and Housing Census, Volume II: Distribution of Population by Administrative Units, December 2019, Kenya National Bureau of Statistics, <https://www.knbs.or.ke/?wpdmpo=2019-kenya-population-and-housing-census-volume-ii-distribution-of-population-by-administrative-units>). Variable: `weight`

Panel Weights To construct panel weights, we follow the approach outlined in Himelein (2014): “Weight Calculations for Panel Surveys with Subsampling and Split-off Tracking”. In each household we follow one target respondent. Wherever households split, only the current household of the target respondent was interviewed. The weights for the wave 1 and 2 balanced panel are constructed by applying the following steps to the full sample of Kenyan nationals:

- Wave 1 cross-sectional weights after post-stratification adjustment are used as a base. $W_1 = W_{wave1}$
- Attrition adjustment through propensity score-based method: The predicted probability that a sample household was successfully re-interviewed in the second survey wave is estimated through a propensity score estimation. The propensity score (PS) is modeled with a linear logistic model at the level of the household. The dependent variable is a dummy indicating whether a household that has completed the survey in wave 1 has also done so in wave. The following covariates were used in the linear logistic model: Urban/rural dummy, County dummies, Household head gender, Household head age, Household size, Dependency ratio, Dummy: Is anyone in the household working, Asset ownership: Radio, Asset ownership: Mattress, Asset ownership: Charcoal Jiko, Asset ownership: Fridge, Wall material: 3 dummies, Floor materials: 3 dummies, Connection to electricity grid, Number of mobile phones numbers household uses, Number of phone numbers recorded for follow-up, Sample dummy for estimation with national samples
- Rank households by PS and split into 10 equal groups
- Calculate attrition adjustment factor: ac (attrition correction) = the reciprocal of the mean empirical response rate for the propensity score decile
- Adjust base weights for attrition: $W_2 = W_1 * ac$
- Trim top 1 percent of the weights distribution ($W_3 = trim(W_2)$)
- Apply post-stratification in the same way as for cross-sectional weights (step 2)

Variable: `weight_panel_w1_2`

The balanced panel weights including waves 3 and 4 were constructed using the same procedure. Variables: `weight_panel_w1_2_3` and `weight_panel_w1_2_3_4`

Data Collection

DATA COLLECTION MODE

Computer Assisted Telephone Interview [cati]

DATA COLLECTION NOTES

PRE-LOADED INFORMATION: Basic household information was pre-loaded in the CATI assignments for each enumerator. The information, for example the household's location, household head name, phone numbers et cetera, was used to help enumerators call and identify the target households. The list of individuals from the KIHBS CAPI pilot and their basic characteristics were uploaded which helped maintain the panel of individuals and ensured the status of each individual in the wave 2 survey.

RESPONDENTS: The COVID-19 RRPS had ONE RESPONDENT per household, The target respondent was defined as the primary male or female from 2015/16 KIHBS CAPI Pilot. They were randomly chosen where both existed to maintain gender balance. If the target respondent was not available for a call, the field team spoke to any adult currently living in the household of the target respondent. If the target respondent was deceased, the field team spoke to any adults that lived with the target respondent in 2015/16. Finally, if the household from 2015/16 split up, we targeted anyone in the household of the target respondent but did not survey a household member that no longer lives with the target respondent. For the sample based on Random Digit Dialing, the target respondent was the owner the phone number that was randomly selected.

Value	Category
1	Wave 1 (14/5/2020-8/7/2020)
2	Wave 2 (16/7/2020-18/9/2020)
3	Wave 3 (28/9/2020-30/11/2020)
4	Wave 4 (15/1/2021-25/3/2021)
5	Wave 5 (29/3/2021-13/6/2021)
6	Don't know
7	Refused to answer
8	Outlier set to missing
9	Inconsistency set to missing
10	Not applicable

Description

SOURCE OF INFORMATION

Bi-monthly panel wave

Imputation and derivation

IMPUTATION

Bi-monthly panel wave

Others

SECURITY

Bi-monthly panel wave

WEIGHT: Household (respondent) cross-sectional weights for each wave**Data file: HH Wave 5**

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 418 Format: Numeric

Description

SOURCE OF INFORMATION

Household (respondent) cross-sectional weights for each wave

Imputation and derivation

IMPUTATION

Household (respondent) cross-sectional weights for each wave

Others

SECURITY

Household (respondent) cross-sectional weights for each wave

WEIGHT_LABOR: Cross-sectional weight for reduced sample for analysis of employment data

Data file: HH Wave 5

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 405 Format: Numeric

Description

SOURCE OF INFORMATION

Cross-sectional weight for reduced sample for analysis of employment data

Imputation and derivation

IMPUTATION

Cross-sectional weight for reduced sample for analysis of employment data

Others

SECURITY

Cross-sectional weight for reduced sample for analysis of employment data

WEIGHT_WEEKLY: Household (respondent) weekly weight

Data file: HH Wave 5

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 1880 Format: Numeric

Description

SOURCE OF INFORMATION

Panel weights for wave 1 and 2 balanced panel

Imputation and derivation

IMPUTATION

Panel weights for wave 1 and 2 balanced panel

Others

SECURITY

Panel weights for wave 1 and 2 balanced panel

WEIGHT_PANEL_W1_2_3: Panel weights for wave1, 2 and 3 balanced panel

Data file: HH Wave 5

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 521 Format: Numeric

Description

SOURCE OF INFORMATION

Panel weights for wave1, 2 and 3 balanced panel

Imputation and derivation

IMPUTATION

Panel weights for wave1, 2 and 3 balanced panel

Others

SECURITY

Panel weights for wave1, 2 and 3 balanced panel

WEIGHT_PANEL_W1_2_3_4: Panel weights for wave1, 2, 3 and 4 balanced panel

Data file: HH Wave 5

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 529 Format: Numeric

Description

SOURCE OF INFORMATION

Panel weights for wave1, 2, 3 and 4 balanced panel

Imputation and derivation

IMPUTATION

Panel weights for wave1, 2, 3 and 4 balanced panel

Others

SECURITY

Panel weights for wave1, 2, 3 and 4 balanced panel

WEIGHT_PANEL_W1_2_3_4_5: Panel weights for wave1, 2, 3, 4 and 5 balanced panel

Data file: HH Wave 5

Overview

Valid: 0 Invalid: 0

Type: Discrete Decimal: 0 Range: 1 - 498 Format: Numeric
