Ethiopia	ETH

STUDY TYPE

Other Household Survey [hh/oth]

SERIES INFORMATION

The Disaster Poverty Household Survey (DPHS) is designed to collect information to assess the relationship between disaster risk (exposure, vulnerability, and capacity to recover) and poverty in the urban environment. The data can be used to explore policy-relevant research topics related to climate change adaptation, urbanization, urban poverty, and more.

DPHS data contains information on household characteristics, household expenditure, living conditions and household experience with disasters. Household characteristics include household size and member level information on religion, education, and labor. Household expenditure is collected using the Survey of Well-being via Instant and Frequent Tracking (SWIFT) methodology, which estimates household income (or consumption expenditure) based on non-monetary variables that are highly correlated with poverty. Information on living conditions covers housing quality, asset ownership, access to services and jobs, rent and housing costs and tenure arrangements. Information on experiences with disasters includes direct and indirect impacts of historic disasters on household assets, education, health and labor access, as well as impacts on public services. There is also information on coping behaviors and perception of risk of future exposure. The DPHS can be customized to collect information on different disasters. So far, it has mainly focused on the impacts of urban flooding.

This initiative is led by Global Facility for Disaster Reduction and Recovery (GFDRR) and was developed and implemented in strong collaboration with the Poverty Global Practice and Urban, Disaster Risk Management, Resilience and Land Global Practice (GPURL) at the World Bank, as well as counterparts (Ministries of Finance, local and city governments, national statistical agencies, disaster risk management agencies, etc.) and selected survey firms.

ABSTRACT

The DPHS in Addis Ababa and Dire Dawa was conducted in May and June 2017, with the objective to assess the role of poverty in disaster risk, focusing primarily on urban flooding but also other hazards.

This project was a collaborative effort between Global Facility for Disaster Reduction and Recovery (GFDRR), the Poverty Global Practice and Urban, Disaster Risk Management, Resilience and Land Global Practice (GPURL). Data collection was carried out by UDA Consulting under the supervision of the World Bank.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

- Household
- Individual

Scope

NOTES

The survey covered the following topics:

- Household information
- Household roster: demographic characteristic, education attainment, labor participation, health
- Household enterprises
- Asset ownership
- Housing and services: tenure arrangements, land rights, credit for land, housing costs and rent, tenure security, housing quality, access to services, agricultural practices, social protection (UPSNP), source of income, remittances
- Investments in housing
- Shock roster (flood, landslide, fire)
- Experience with shocks
- Idiosyncratic shocks
- Preventive measures flood
- Perception of future risk
- Food Insecurity (Reduced Coping Strategy Index CSI-R)
- Depression

Coverage

GEOGRAPHIC COVERAGE

Cities of Addis Ababa and Dire Dawa, Ethiopia.

Sampling

SAMPLING PROCEDURE

Satellite images of Addis Adaba and Dire Dawa were used to divide both cities into 100m x 100m grids and among those, 173 and 81 grids in Addis Ababa and Dire Dawa respectively were randomly selected. In each selected grid, a 10 x 10 meters secondary dot grids were created. Then, in each secondary grid, 5 households were randomly assessed for inclusion. If the house corresponded to the characteristics of a residential and “low-income/slum” dwelling, it was included in the sample. While the sampling was carried out in a manner to assure representativeness at the city level, caution should be taken before generalizing results generating from this data for the entire city population. This is because the sample intended to sample slum dwellers and low-income households (based on factors that are detectable in high-resolution satellite imagery and visible from above, such as quality of roofing and dwelling size, size of plot, etc.).

Questionnaires

QUESTIONNAIRES

The survey questionnaire consists of 13 sections that were used to collect the survey data. See the attached questionnaire.

Data Processing

DATA EDITING

The following data editing was done for anonymization purposes:

- Precise location data, such as GPS coordinates, and 10 x 10 meters grids were dropped
- Personal information, such as names and phone numbers were dropped
- The number of religions reported was reduced from 6 to 3 categories, the number of ethnicities from 14 to 4 categories, marital status from 6 to 4 categories
- Household size exceeding seven household members was categorized as "above 7 members"
- Household member information for 7th member and above was dropped to avoid reconstruction of the household size variable.

For more information on the anonymization process, see the Technical Document.
