In FY2021, surveys were conducted in 36 countries. Nearly all of the World Bank Group's client countries are surveyed in every three year cycle.

ABSTRACT

The Country Opinion Survey in Croatia assists the World Bank Group (WBG) in gaining a better understanding of how stakeholders in Croatia perceive the WBG. It provides the WBG with systematic feedback from national and local governments, multilateral/bilateral agencies, media, academia, the private sector, and civil society in Croatia on 1) their views regarding the general environment in Croatia; 2) their overall attitudes toward the WBG in Croatia; 3) overall impressions of the WBG's effectiveness and results, knowledge work and activities, and communication and information sharing in Croatia; and 4) their perceptions of the WBG's future role in Croatia.

Sampling

SAMPLING PROCEDURE

From April to July 2021, 697 stakeholders of the WBG in Croatia were invited to provide their opinions on the WBG's work in the country by participating in a Country Opinion Survey. Participants were drawn from the Office of the President, Prime Minister; office of a minister; office of a parliamentarian; ministries/ministerial departments/implementation agencies; Project Management Units (PMUs) overseeing implementation of WBG projects; consultants/ contractors working on WBG-supported projects/programs; local governments; independent government institutions; the judicial system; state-owned enterprises; bilateral and multilateral agencies; private sector organizations; the financial sector/private banks; NGOs and community based organizations; trade unions; the European Commission, youth groups; academia/research institutes/think tanks; the media; and other organizations.

RESPONSE RATE

Response rate was 22%.

WEIGHTING

The results in this year's Country Survey were compared to those in the Country Survey conducted in FY'18 (response rate was 28%, N=143). Comparing responses across Country Surveys reflect changes in attitudes over time, but also changes in respondent samples and changes to the survey instrument itself. To reduce the influence of the latter factor, only those questions with similar response scales/options were analyzed. To reduce the influence of the former, the samples are usually weighted to have equivalent stakeholder groupings, allowing for more statistically reliable comparisons. However, in Croatia, the two samples had somewhat different stakeholder compositions: in FY'18, there was a higher number of respondents from the private sector (12.3%) and the media (6.9%), while in FY'21 - from the local government (8.6%) and civil society (15.8%). Weighting such a discrepant sample can create statistically unreliable samples, so for this reason, the year comparisons included in the FY'21 COS report are based on unweighted data. One should keep in mind these differences when interpreting the results.
