V. Fundraising

Preload ${_cfund}

After that, we will select one county from the selected county set. The selected county will be labelled ${_cfund}

 "We are making an effort to provide money for text books and pens for students in a school located in ${_cfund} .
I am going to give you a chance to contribute to this fundraiser.

I have a bucket of beans with different coloured beans inside. I want you to find the red beans.

The bucket of beans should be filled with a mixture of different kinds of beans, and 25 red beans (or some other kind of local beans – it just needs to be distinctive enough that it's easy for the FO to identify. It should be somewhat tedious to pick out the red beans when there are only 15 left.

Some children will be selected to play for real money that will be donated to a school in ${_cfund}.

If you are selected, for every red bean you pick out, you will raise 25 Kes for the school in ${_cfund}.

[beannum1] How many beans did the pupil find? [integer]

Now I want to give you a chance to raise money for a county of your choice. We will do the same thing, but at the end you will get to choose which county receives the money.

[beannum2] How many beans did the pupil find? [integer]

[beancounty2] What county do you want to give the money to? County Prefill
