ABSTRACT

The UNHCR Standardized Expanded Nutrition Surveys (SENS) provide regular nutrition data that plays a key role in delivering effective and timely interventions to ensure good nutritional outcomes among populations affected by forced displacement. This survey was conducted in the 3 camps and 2 reception areas for Malian refugees (Abala, Tabarbarey, Mangaizé, Intikan and Tazalit) in Niger that includes 54,859 refugees (11,362 households). The survey was jointly conducted by UNHCR, the World Food Programme (WFP), UN Childrens Fund (UNICEF) and the Ministry of Health. Data collection in the Malian camps took place from May 30 to June 19, 2016 with the main objective of assessing the prevalence of global and severe acute malnutrition by age group and sex.

Sampling

SAMPLING PROCEDURE

The sample size was calculated individually for each camp using the ENA for SMART software. A simple random sample was drawn independently in each refugee camp/location.

The total size of the sample frame was 11,362 households including 8,905 children under five. The total sample in all five refugee camps/location includes 1,032 households, 855 women (in 783 households) and 1,835 children under five.

More details, including sample by camp/location, are available in the report.

WEIGHTING

Data are weighted by refugee camp and target population: children 0-59 months, women 15-49 years and households. Design weights included in datasets (see survey_weight).
