# Sampling

## Sampling Procedure

---

MICRODATA SOURCE: National Statistical Office

SAMPLE DESIGN: The sample was obtained by drawing a stratified sample of "Long Form" questionnaires. The strata were Bangkok and the four regions (Central, North, Northeastern, South) of Thailand, cross-classified by municipal and nonmunicipal areas.

SAMPLE UNIT: Household

SAMPLE FRACTION: 1%

SAMPLE SIZE (person records): 388,141

## Weighting

---

Calculated by the NSO based on stratified sample design.

# Questionnaires

## Overview

---

The population was enumerated with Form 2. There were two types of Form 2: (i) A Short Form which was used to collect information on 11 population characteristics for every household, and (ii) a Long Form with 26 population questions and 18 housing questions. Part 1 of the Long Form identifies the household; Part 2 collects information on the individuals; and Part 3 contains housing questions which were asked of private households only. For Bangkok and all non-municipal areas, the enumeration was carried out in two stages. In stage one, private households were enumerated using the Short Form, while collective households were enumerated using the Long Form (but were not asked questions on housing characteristics). In stage two, a 20% of private households were selected for another enumeration with the Long Form. For all other municipal areas, all persons and households were enumerated using the Long Form, but collective households were not asked detailed housing questions.

## Data Collection

### Data Collection Dates

---

<b>Start</b>	<b>End</b>	<b>Cycle</b>
1980-04-01	1980-04-01	N/A

### Time Periods

---

<b>Start</b>	<b>End</b>	<b>Cycle</b>
1980-04-01	1980-04-01	N/A

### Data Collection Mode

---

Face-to-face [f2f]

#### **DATA COLLECTION NOTES**

De jure (except for students), CENSUS DAY: April 1, 1980, FIELD WORK PERIOD: April 1980

#### **SUPERVISION**

Direct enumeration via house-to-house visits and personal interviews.
