ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality).

The FAO launched on 8 July 2021 a household survey designed to reach 4 750 households spanning 17 governorates in Yemen. The data collection resumed on 18 September 2021 actually reaching 3 687 households. The survey was representative of vulnerable agricultural households at the governorate (admin 1) level, with a 95 percent confidence level and a 6 percent margin of error. Sampling

SAMPLING PROCEDURE

Data were collected through computer-assisted telephone interviews from 8 July to 18 September 2021. Initially, the survey was designed to cover 4 750 households spanning 17 governorates. Of these, 3 687 households could be reached. The household survey was representative of vulnerable agricultural households at the governorate (admin 1) level, with a 95 percent confidence level and a 6 percent margin of error. The sample was drawn from a verified list of beneficiaries of all active and closed FAO projects in Yemen; it is therefore not representative of the entire population. Due to small sample sizes in Amanat Al Asimah, and Al Mahwit governorates, findings should be considered indicative.
