ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). This fourth-round survey in Somalia reached 2950 households, approximately 160 agricultural households per region. All the regions of Somalia were targeted for data collection except Banadir. Therefore, 17 out of 18 regions were surveyed. The surveys were conducted from 7 April 2022 to 27 May 2022 through computer-assisted telephone interviews (CATI). The delay in data collection was due to the Eid holidays and political instability. For more information, please go to <https://data-in-emergencies.fao.org/pages/monitoring>

This fourth-round survey utilized panel data and random digital dialing (RDD) techniques reaching 2950 households, approximately 160 agricultural households per region. Nugaal, Sanaag and Middle Juba regions were not representative at a regional level because there were fewer than 90 households interviewed in each of these regions. All the regions of Somalia were targeted for data collection except Banadir. Therefore, 17 out of 18 regions were surveyed.
