### STUDY TYPE

World Health Survey [hh/whs]

### SERIES INFORMATION

The Study on Global Ageing and Adult Health is the third round of the World Health Survey which was conducted in 2003. SAGE surveys are designed by the World Health Organization and implemented by national agencies in participating countries.

### ABSTRACT

The multi-country Study on Global Ageing and Adult Health (SAGE) is run by the World Health Organization's Multi-Country Studies unit in the Health Systems and Innovation Cluster. SAGE is part of the unit's Longitudinal Study Programme which is compiling longitudinal data on the health and well-being of adult populations, and the ageing process, through primary data collection and secondary data analysis. SAGE baseline data (Wave 0, 2002/3) was collected as part of WHO's World Health Survey <http://www.who.int/healthinfo/survey/en/index.html> (WHS). SAGE Wave 2 (2014/15) provides a comprehensive data set on the health and well-being of adults in six low and middle-income countries: China, Ghana, India, Mexico, Russian Federation and South Africa.

### Objectives:

To obtain reliable, valid and comparable health, health-related and well-being data over a range of key domains for adult and older adult populations in nationally representative samples

To examine patterns and dynamics of age-related changes in health and well-being using longitudinal follow-up of a cohort as they age, and to investigate socio-economic consequences of these health changes

To supplement and cross-validate self-reported measures of health and the anchoring vignette approach to improving comparability of self-reported measures, through measured performance tests for selected health domains

To collect health examination and biomarker data that improves reliability of morbidity and risk factor data and to objectively monitor the effect of interventions

### Additional Objectives:

To generate large cohorts of older adult populations and comparison cohorts of younger populations for following-up intermediate outcomes, monitoring trends, examining transitions and life events, and addressing relationships between determinants and health, well-being and health-related outcomes

To develop a mechanism to link survey data to demographic surveillance site data

To build linkages with other national and multi-country ageing studies

To improve the methodologies to enhance the reliability and validity of health outcomes and determinants data

To provide a public-access information base to engage all stakeholders, including national policy makers and health systems planners, in planning and decision-making processes about the health and well-being of older adults

### Methods:

SAGE's first full round of data collection included both follow-up and new respondents in most participating countries. The goal of the sampling design was to obtain a nationally representative cohort of persons aged 50 years and older, with a smaller cohort of persons aged 18 to 49 for comparison purposes. In the older households, all persons aged 50+ years (for example, spouses and siblings) were invited to participate. Proxy respondents were identified for respondents who were unable to respond for themselves. Standardized SAGE survey instruments were used in all countries consisting of five main parts: 1) household questionnaire; 2) individual questionnaire; 3) proxy questionnaire; 4) verbal autopsy questionnaire; and, 5) appendices including showcards. A VAQ was completed for deaths in the household over the last 24 months. The

procedures for including country-specific adaptations to the standardized questionnaire and translations into local languages from English follow those developed by and used for the World Health Survey.

## Scope

### NOTES

The scope of the Study on Global Ageing and Adult Health includes:

- Household: household characteristics, housing, household and family support, assets and household income, household expenditure.
- Individual: socio demographic characteristics, work history, health state, anthropometrics, performance tests and biomarkers, risk factors, chronic conditions and health service coverage, health care utilisation, social networks, subjective well-being and quality of life, caregiving.

## Coverage

### GEOGRAPHIC COVERAGE

National coverage

### UNIVERSE

The household section of the survey covered all households in 31 of the 32 federal states in Mexico. Colima was excluded. Institutionalised populations are excluded.

The individual section covered all persons aged 18 years and older residing within individual households. As the focus of SAGE is older adults, a much larger sample of respondents aged 50 years and older was selected with a smaller comparative sample of respondents aged 18-49 years.

## Sampling

### SAMPLING PROCEDURE

In Mexico strata were defined by locality (metropolitan, urban, rural). All 211 PSUs selected for wave 1 were included in the wave 2 sample. A sub-sample of 211 PSUs was selected from the 797 WHS PSUs for the wave 1 sample.

The Basic Geo-Statistical Areas (AGEB) defined by the National Institute of Statistics (INEGI) constitutes a PSU. PSUs were selected probability proportional to three factors:

- (WHS/SAGE Wave 0 50plus): number of WHS/SAGE Wave 0 50-plus interviewed at the PSU,
- (State Population): population of the state to which the PSU belongs,
- (WHS/SAGE Wave 0 PSU at county): number of PSUs selected from the county to which the PSU belongs for the WHS/SAGE Wave 0

The first and third factors were included to reduce geographic dispersion. Factor two affords states with larger populations a greater chance of selection.

All WHS/SAGE Wave 0 individuals aged 50 years or older in the selected rural or urban PSUs and a random sample 90% of individuals aged 50 years or older in metropolitan PSUs who had been interviewed for the WHS/SAGE Wave 0 were included in the SAGE Wave 1 "primary" sample. The remaining 10% of WHS/SAGE Wave 0 individuals aged 50 years or older in metropolitan areas were then allocated as a "replacement" sample for individuals who could not be contacted or did not consent to participate in SAGE Wave 1. A systematic sample of 1000 WHS/SAGE Wave 0 individuals aged 18-49 across all selected PSUs was selected as the "primary" sample and 500 as a "replacement" sample.

This selection process resulted in a sample which had an over-representation of individuals from metropolitan strata; therefore, it was decided to increase the number of individuals aged 50 years or older from rural and urban strata. This was achieved by including individuals who had not been part of WHS/SAGE Wave 0 (which became a "supplementary" sample), although the household in which they lived included an individual from WHS/SAGE Wave 0. All individuals aged 50 or over were included from rural and urban "18-49 households" (that is, where an individual aged 18-49 was included in WHS/SAGE Wave 0) as part of the "primary supplementary" sample. A systematic random sample of individuals aged 50 years or older was then obtained from urban and rural households where an individual had already been selected as part of the 50 years and older or 18-49 samples. These individuals then formed part of the "primary supplementary" sample and the remainder (that is, those not systematically selected) were allocated to the "replacement supplementary" sample. Thus, all individuals aged 50 years or older who lived in households in urban and rural PSUs obtained for SAGE Wave 1 were selected as either a primary or replacement participant. A final "replacement" sample for the 50 and over age group was obtained from a systematic sample of all individuals aged 50 or over from households which included the individuals already selected for either the 50 and over or 18-49. This sampling strategy also provided participants who had not been included in WHS/SAGE Wave 0, but lived in a household where an individual had been part of WHS/SAGE Wave 0 (that is, the "supplementary" sample), in addition to follow-up of individuals who had been included in the WHS/SAGE Wave 0 sample.

Strata: Locality = 3

PSU: AGEBS = 211

SSU: Households = 6549 surveyed

TSU: Individual = 6342 surveyed

### RESPONSE RATE

Household response rate was 83%.

Main reason for non-response was the inability to locate the household.

Individual response rate was 81%.

### WEIGHTING

Household weights(variable hhweight) for analysis at household level and individual weights(variable pweight) for analysis at

person level were calculated. These were based on the selection probability at each stage of selection. Household weights were post-stratified by locality according to the 2009 population census projections. Individual weights were post-stratified by sex and age-groups (18-34, 35-49, 50-59, 60-105) according to the 2009 population census projections. Weights are divided by 1000 and are not normalized.

### DATA COLLECTION NOTES

The pre-test for the study took place on 24 July 2014 in the municipality of Ocoyoacac in the state of Mexico. 14 household questionnaires were administered, 2 verbal autopsy, 16 individual, 1 proxy. Anthropometrics were obtained for 14 respondents.

No blood samples were taken. The pre-test data is not included in the final dataset.

There were 5 fieldwork teams. Each team was headed by a fieldwork coordinator who supervised one IT specialist and 2 supervisors. Each supervisor was responsible for 2 interviewers and one nurse.

A total of 5 coordinators, 10 supervisors, 5 IT specialists, 20 interviewers and 10 nurses comprised the fieldwork team.

Data collection took place over a period of about 12 weeks from 27 July until 14 October, 2014. Interviewing took place everyday throughout the fieldwork period.

Interviews were conducted in Spanish.

### QUESTIONNAIRES

The questionnaires were based on the SAGE Wave 1 Questionnaires with some modification and new additions, except for verbal autopsy. SAGE Wave 2 used the 2012 version of the WHO Verbal Autopsy Questionnaire. SAGE Wave 1 used an adapted version of the Sample Vital Registration with Verbal Autopsy (SAVVY) questionnaire.

A Household questionnaire was administered to all households eligible for the study.

A Verbal Autopsy questionnaire was administered to 50 plus households only. In follow-up 50 plus household if the death occurred since the last wave of the study and in a new 50 plus household if the death occurred in the the past two years. Deceased had to be 50 years or more at the time of death.

An Individual questionnaire was administered to eligible respondents identified from the household roster.

A Proxy questionnaire was administered to individual respondents who had cognitive limitations.

The questionnaires were developed in English. All documents were translated into Spanish. All SAGE generic English questionnaires are available as external resources.

## LITERAL QUESTION

What is the total number of people who live in this household?

**description**

## DEFINITION

In order to determine who remains in the household from the last time the survey team was here, and any new household members since then, I need to know who lives at this address. I have a record of household members from the last interview, and I will start with these people.

In order to determine who to interview, I need to know who lives at this address.

## UNIVERSE

ALL: Let me assure you that any information you provide is strictly confidential. By asking "who lives at this household?", I mean those who share meals ('eat out of the same pot') and usually stay here for at least four months a year.

I would like to know the age, sex, marital status, educational level and relationship to the household head of each of the members of this household who live here.

Please include people who may presently be in an institution due to their health (for example, in hospital or old people's home) for a short time.

**INTERVIEWER INSTRUCTIONS**

Interviewer: You will select an informant to complete the remaining sections of the household questionnaire and a respondent for the individual questionnaire at his point. The household informant and individual respondent may or may not be the same person. We want to interview all persons aged 50 years and older present in the household on the day of the interview, but someone younger than 50 may complete the household questionnaire.

**A. INSTRUCTIONS FOR SELECTING RESPONDENT FOR HOUSEHOLD QUESTIONNAIRE**

INTERVIEWER: For the Household Informant, choose the person in the household most knowledgeable about the household and household members' health status, employment, financial condition, expenditures and health insurance. Several persons in the household may have to be spoken to in order to determine this, but the most knowledgeable should be identified and coded in Q0451. The person identified here may be different from the person chosen to complete the individual questionnaire.

INTERVIEWER: Indicate who is the 'Household Informant'?

## DEFINITION

The next questions are about your family and friends, specifically those not living with you in this household. Families and friends sometimes help one another in a variety of different ways, and each type of help or support can be important. Part of our survey involves finding out how they do that. We would now like to ask some questions about your family and friends who do not live with you, and the different ways in which you help or support each other. The next questions are about help received by your household in the last 12 months.

## INTERVIEWER INSTRUCTIONS

INTERVIEWER: The first part of this section is intended to collect information about sources of transfers into the household from those outside the household.

## description

## DEFINITION

The next questions are about your family and friends, specifically those not living with you in this household. Families and friends sometimes help one another in a variety of different ways, and each type of help or support can be important. Part of our survey involves finding out how they do that. We would now like to ask some questions about your family and friends who do not live with you, and the different ways in which you help or support each other. The next questions are about help received by your household in the last 12 months.

2. Yes, regular but seasonal
3. No

**description**

## UNIVERSE

In the last part of this section, I will ask about the total income for the household in the last 12 months (previous to today) from paid work or other sources. I would like to know about all sources of income. I know it may be difficult to calculate that figure, but please do try to give as accurate an amount as possible. Remember that all information will be kept strictly confidential. This information is important to assess overall health and well-being of people in your household compared to other similar households

## description

### UNIVERSE

I would like to ask you more specific questions about how much your household and all its members spent in cash or in-kind on all health care and services that did not require an overnight stay. Again, we want expenses in the last 30 days. If payment was in-kind, please estimate a monetary value. Please exclude costs to be reimbursed by insurance.

## description

### UNIVERSE

I know these questions may be difficult to answer - try to give us the best estimate of expenses. Now I want you to focus on household expenses over the last 12 months. These are expenses that may be more periodic or "big purchases". I would like to ask how much money was spent by all household members for the following items in the last 12 months.

## description

### DEFINITION

Last, we want you to think of a typical month and the expenditures for your household. We want to know an average total amount your household spends on all items. This includes the total amount your household and all its members spent on everything, for example, clothing, transport, rent and rates, school fees, food, drink, entertainment, health care and all other expenses.

#### QUESTION PRETEXT

I would like to start by asking you some background questions before asking you questions about your health. This information is confidential and you will not be identified individually or without your consent.

One of the issues we are exploring in this study is the memory problems that some older persons can have. I know these questions may be sensitive or difficult to answer, but please try to provide an answer. I would like to start by asking you two questions about your memory.

#### LITERAL QUESTION

How would you best describe your memory at present? Is it very good, good, moderate, bad or very bad?

## DEFINITION

These next questions ask about difficulties due to health conditions. Health conditions include diseases or illnesses, other health problems that may be short or long lasting, injuries, mental or emotional problems, and problems with alcohol or drugs.

Think back over the last 30 days and answer these questions thinking about how much difficulty you had doing the following activities. Some of these questions may seem repetitive, but we do need your attention and it is important to give us answers to each question

 Type: Continuous   Decimal: 0   Width: 8   Range: 83 - 266   Format: Numeric

## Questions and instructions

### QUESTION PRETEXT

First I would like to measure your blood pressure and pulse rate. Stay seated, and once I put this on your wrist, keep it steady and at the level of your heart. We will need to take the blood pressure reading three times. It will squeeze your wrist a bit, but won't hurt. Relax.

### LITERAL QUESTION

Time 1, Systolic

### INTERVIEWER INSTRUCTIONS

INTERVIEWER: respondent should remain seated. Demonstrate to the respondent how to hold their arm while the machine is measuring. Place the monitoring device on the wrist and have the respondent hold it at heart level against his/her chest. When the device is in the correct position and respondent is relaxed, press the button to start. Check to make sure it is

working. Collect the blood pressure and pulse 3 times with one minute between each measurement. You do not need to remove the device between measurements.

## INTERVIEWER INSTRUCTIONS

Distance vision

INTERVIEWER: Start with the distance vision chart - using the 4 metres measured out for the timed walk. If the respondent makes more than 2 errors in one row, and reads all letters in the row, their result is read as the previous row. Select and record the result from the column labeled "DECIMAL" on the left side of the chart.

#### INTERVIEWER INSTRUCTIONS

Remain sitting and let your hand drop to your side. Keep your upper arm against your body and bend your elbow to 90 degrees with palm facing in (like shaking hands). Keep your elbow pressed against your side. INTERVIEWER: DEMONSTRATE. Then grab the two pieces of metal together like this.

INTERVIEWER: DEMONSTRATE.

I will ask you to do this two times in each hand. Let's start with your left hand, please take this in your left hand.

If you feel any pain or discomfort, tell me and we will stop.

When I say "squeeze", squeeze as hard as you can.

Interviewer: Check positioning and grip to make sure it is correct. When he or she begins, say: Squeeze, squeeze, squeeze!

**description****UNIVERSE**

Next I am going to ask you about the time you spend doing different types of physical activity in a typical week. Please answer these questions even if you do not consider yourself to be an active person. Think first about the time you spend doing work. Think of work as the things that you have to do such as paid or unpaid work, household chores, harvesting food/crops, fishing or hunting for food, providing care or seeking employment.

In answering the following questions 'vigorous activities' require hard physical effort and cause large increases in breathing or heart rate, 'moderate activities' require moderate physical effort and cause small increases in breathing or heart rate.

## DEFINITION

We would like to shift away from questions about your direct health. This section of the survey asks your opinions about other areas and issues in your life. The following questions are to get your opinions about community, social and political aspects in your life.

We'd like to know about some of your involvement in your community. For all of these, I want you just to give me your best guess, and don't worry that you might be off a little.

## QUESTION PRETEXT

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.

## QUESTION PRETEXT

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.

Were you talking or interacting with anyone when you did this? By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

## QUESTION PRETEXT

Please tell me the main things that you did yesterday afternoon from around noon/mid-day until evening time (around 18.00 or 6pm). Please also mention if anyone was with you for any parts of the afternoon.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to describe only the activities from your afternoon yesterday between mid-day and evening.

QUESTION PRETEXT

Please tell me the main things that you did yesterday evening from around 6pm (18.00) until you went to sleep. Please also mention if anyone was with you for any parts of the evening.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way.

## INTERVIEWER INSTRUCTIONS

CAPI: CHECK HH ROSTER - IF SINGLE PERSON HH - if answer to Q8001 is 1 (yes) then SKIP TO Q8060 (care receiving)

## QUESTION POST TEXT

1. Yes
2. No To Q8030 outside HH

**description**

## DEFINITION

In the following questions, we want to find out about how families and households cope and support each other in times of need or through prolonged illnesses and death. I would like to spend some time talking to you about people who have needed care or support, adults who have been ill or died in the last 12 months and/or children who require care due to illness or age. I will ask about care you have provided, and also care you have received. The information you provide will be kept strictly confidential and will be used to improve programs for families and children in need.

## UNIVERSE

I will ask you a few questions about adults and children in your household who need or needed care, due to age (young or old), physical limitations, illness or other reasons, or have been ill and died in the last 12 months. By care or caregiving we mean financial or emotional support, physical, health or personal care provided to an individual. This includes both daily personal care such as help with eating, dressing, bathing, moving around in the house, as well as assistance with their affairs outside the house such as transportation to see doctors, getting to school, going to buy medicine or medical appointment, assistance with studies or managing the ill person's financial situation, health care, emotional well-being or other personal affairs.

**description**

## DEFINITION

I want to shift now to questions about children under the age of 18 in the household, and about care you provide or have provided over the last 12 months - including those for whom one or both parents are ill or absent (prolonged illness or absent through death or migration or other reason). Care could be related to physical care, health care, financial or emotional support or other reasons, where you are responsible for the well-being of the child/children.

#### DEFINITION

Now I would like to review the different functions of her/his body. When answering these questions, I would like you to think about the last 30 days, taking both good and bad days into account. When I ask about difficulty the respondent may have, I would like you to consider how much difficulty s/he had, on average, in the last 30 days, while doing the activity in the way that s/he usually does it. By difficulty, I mean requiring increased effort, discomfort or pain, slowness or changes in the way s/he does the activity.

## DEFINITION

I would like to ask you some questions concerning the context and previously known medical conditions the deceased had; injuries and accidents that the deceased suffered; and signs and symptoms that the deceased had/showed when s/he was ill. Some of these questions may not appear to be directly related to his/her death. Please bear with me and answer all the questions. They will help us to get a clear picture of all possible symptoms that the deceased had.
