

Anonymization Report

The datasets were anonymized by the team using the sdcMicro package. To minimize the risk of re-identification, we have taken the following steps in accordance with the UNHCR curation handbook: 1). Dropped any sensitive variables (e.g., names, dates of birth); 2). Recoded categorical variables; 3). Suppressed the following key categorical variables in the individual-level dataset: HHsize (3 observations suppressed), age_group (35), wq1104 (68), country_of_birth (10), duration (61), wq2109_c (1), curr_grade (3), and wq2109_rv (135); 4). Randomly removed from the individual-level dataset members of households (except for household heads) whose household size exceeds 10; 5). Top-coded wq6303a at the value of 5 in the household-level dataset.
