TITLE

Harmonized Host and Refugee Labor Market Survey 2022

ABBREVIATION OR ACRONYM

HHR-LMS 2022

COUNTRY/ECONOMY

Name	Country code
Uganda	UGA

STUDY TYPE

Other Household Survey [hh/oth]

ABSTRACT

The primary purpose of the Harmonized Host and Refugee Labor Market Survey (HHR-LMS) in Uganda is to provide information relevant for studying the impact of forced displacement on labor market outcomes for host communities, both among Ugandan nationals and refugees. The survey aims to obtain detailed information that helps explore labor market outcomes for host and refugee communities living side by side and engaging in shared labor market settings.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

Household or respondent, depending on survey module.

Version

VERSION DESCRIPTION

Version 01: Edited, anonymized dataset for public distribution.

Scope

NOTES

The survey is principally a multi topic survey, with several modules. It comprises a household section, with a roster of all household members. The roster includes questions on basic population characteristics. In addition, there is a separate questionnaire for a randomly selected individual (RSI) aged 18-65 in the household. The RSI questionnaire includes a short experimental component where priming question items are introduced conditional on the characteristics of the respondent in order to explore attitudes and perceptions towards refugees as well as exploring labor market integrations.

Coverage

GEOGRAPHIC COVERAGE

The survey covers three locations in Uganda: Kampala, Isingiro district, and the Nakivale refugee settlement.

UNIVERSE

The survey covered all de jure households excluding prison, hospitals, military barracks and school dormitories. It includes both national and refugee households.

Sampling

SAMPLING PROCEDURE

The sampling design included 265 initial enumeration areas selected using probability proportionate to size with the number of households used as a measure of size. The enumeration areas were select-ed based on the sample frame constructed during the 2014 population census of Uganda. The Ugan-dan Bureau of Statistics (UBOS) conducted the selection of the EAs and provided their list along with detailed maps of the areas.

Using maps of the selected enumeration areas provided by UBOS, the study team conducted the list-ing of all households in the selected EAs with door-to-door visits. The listing exercise was carried out during November 2021-January 2022 by a team of local field workers recruited and trained for this purpose.

In Kampala city, in addition to a traditional PPS sample, we employed adaptive cluster sampling (ACS) (Thomson 1997; Thomson and Seber 1996) to capture a sufficient number of refugee house-holds. Using the listing of households in the initial 150 clusters in Kampala, the survey team identified those EAs that have 10 percent or more refugee households and conducted the listing of all of their neighbors. This resulted in listing additional 49 clusters that are identified as neighbors to these initial clusters. The exercise served as a basis for selection of both refugees and national households in Kampala.

In general, the sample design is a two-stage sample, with EAs first selected randomly for listing, followed by random selection of households from the listing. There is an extra third stage of choosing individuals randomly selected in households (RSI). Within each household, one person is selected at random (RSI) from the list of eligible members: persons aged between 18 and 65 years old in a national household; or refugees aged between 18 and 65 years old in a non-national household.

DEVIATIONS FROM THE SAMPLE DESIGN

Description provided in "Harmonized Host and Refugee Labor Market Survey in Uganda, Sampling Description" documentation.

RESPONSE RATE

Description provided in "Harmonized Host and Refugee Labor Market Survey in Uganda, Sampling Description" documentation.

WEIGHTING

Description provided in "Harmonized Host and Refugee Labor Market Survey in Uganda, Sampling Description" documentation.

Data collection

DATES OF DATA COLLECTION

2022-02	2022-04	One cycle

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

DATA COLLECTION NOTES

Using maps of the selected enumeration areas provided by UBOS, the study team conducted the listing of all households in the selected EAs with door-to-door visits. The listing exercise was carried out during November 2021-January 2022 by a team of local field workers recruited and trained for this purpose.

The survey data collection was carried out during February-April 2022.

Questionnaires

QUESTIONNAIRES

Two main questionnaires were used to two sampling units: the household head and a randomly selected individual from within the household among the members of the household who are in the age range of 18 to 65 years old.
