STUDY TYPE

Multiple Indicator Cluster Survey - Round 1 [hh/mics-1]

ABSTRACT

The Sahel Women Empowerment and Demographic Dividend (P150080) project in Burkina Faso focuses on advancing women's empowerment to spur demographic transition and mitigate gender disparities. This project seeks to empower young women by promoting entrepreneurship through business skills training and grants, and by enhancing access to reproductive health information and contraception, thereby aiming to lower fertility rates.

The World Bank Africa Gender Innovation Lab, along with its partners, is conducting detailed impact evaluations of the SWEDD program's key initiatives to gauge their effects on child marriage, fertility, and the empowerment of adolescent girls and young women.

This data represents the first round of data collection (baseline) for the impact evaluation and include a household and community level surveys. The household level sample comprises 9857 households, 70,169 individuals and 9382 adolescent girls and young wives aged 24 living in the Boucle du Mouhoun and the East regions of Burkina Faso. The community level sample includes 175 villages.

The insights derived from this survey could help policymakers develop strategies to:

- Reduce fertility and child marriage by enhancing access to contraceptives and broadening reproductive health education.
- Promote women's empowerment by increasing their participation in economic activities

This data is valuable for planners who focus on improving living standards, particularly for women. The Ministry of Women, National Solidarity, Family, and Humanitarian Action of Burkina Faso, along with District Authorities, Research Institutions, NGOs, and the general public, stand to benefit from this survey data.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

The unit of analysis is adolescent girls for the adolescent survey and households for the household survey.

Sampling

SAMPLING PROCEDURE

We randomly selected 200 villages from the 11 provinces in the two regions of the Boucle du Mouhoun and the East. The 200 villages were selected proportionally, based on the formula $(N_p/N)*200$, where N_p represents the number of eligible villages in the province and N the total number of eligible villages. 25 villages were later dropped because of lack of safety.

A census was first administered in each village to identify eligible girls and young wives, as well as households with these eligible individuals. All households with at least one eligible person then constituted the universe from which the survey sample was drawn. In total 9857 households and 9382 girls and young wives were sampled. A village-level questionnaire was also administered.

The objective of the baseline survey was to build a comprehensive dataset, which would serve as a reference point for the entire sample, before treatment and control assignment and program implementation.

Data collection

DATES OF DATA COLLECTION

Start	End	Cycle
2018-10	2018-11	Baseline

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

DATA COLLECTION NOTES

The main mode of data collection was the use of a structured questionnaire. The respondent was provided with coded answers from which to choose. These questionnaires were administered by enumerators who visited the homes of the participating households at a time convenient for the respondents.

DATA COLLECTORS

Name	Abbreviation
Institut National de la Statistique et de la Démographie	INSD

Questionnaires

QUESTIONNAIRES

The data consists of responses from households to questions pertaining to:

1. List of household members
2. Education of household members
3. Occupations of household members
4. Characteristics of housing and durable goods
5. Food security
6. Household head's aspirations, as well as those of a boy aged 12 to 24
7. Opinions on women's empowerment and gender equality

The questionnaire administered to girls contains the following sections:

1. Education
2. Marriage and children
3. Aspirations
4. Health and family planning
5. Knowledge of HIV/AIDS
6. Women's empowerment
7. Gender-based violence
8. Income-generating activities
9. Savings and credit
10. Personal relationships and social networks
11. Committee members and community participation

The questionnaire administered at the village-level contains the following sections:

1. Social norms (marriage norms)
2. Ethnic and religious compositions
3. Economic infrastructures (markets and roads)
4. Social services
 - a. Health
 - b. Education

The household questionnaire was administered to the head of the household or to an authorized person capable of answering questions about all individuals in the household. The adolescent questionnaire was administered to each eligible pre-selected individual within the household. Considering the modules of the adolescent questionnaire, it was only administered by female enumerators. The village-level questionnaire was administered to a group of three to five village leaders with enough knowledge of the village. The enumerators were instructed to include women in this group whenever possible. The questionnaires were written in French, translated into the local languages, and programmed on tablets in French using the CAPI program.

Data Processing

DATA EDITING

Data was anonymized through decoding and local suppression.

METHODOLOGY NOTES

Adolescent module respondents and household roster: notice that the individual identification in the adolescent module "ida" does not match the one in the household roster "hhid". It is, however, possible to merge the adolescent module and the household roster by using first and last names as reported in each of these modules.

Access policy

CITATION REQUIREMENTS

Use of the dataset must be acknowledged using a citation which would include:

- the Identification of the Primary Investigator
- the title of the survey (including country, acronym and year of implementation)
- the survey reference number
- the source and date of download
