STUDY TYPE

Demographic and Health Survey [hh/dhs]

SERIES INFORMATION

The 2023 Jordan Population and Family Health Survey (2023 JPFHS) is the eighth survey of its kind following the surveys completed from 1990 to 2017–18. The survey involved a nationally representative sample of 19,400 households selected from a random sample of 970 clusters. The survey was designed to yield approximately 15,000 completed interviews of ever-married women age 15 to 49 and 6,400 completed interviews of men age 15 to 59.

ABSTRACT

The 2023 Jordan Population and Family Health Survey (JPFHS) is the eighth Population and Family Health Survey conducted in Jordan, following those conducted in 1990, 1997, 2002, 2007, 2009, 2012, and 2017–18. It was implemented by the Department of Statistics (DoS) at the request of the Ministry of Health (MoH).

The primary objective of the 2023 JPFHS is to provide up-to-date estimates of key demographic and health indicators. Specifically, the 2023 JPFHS:

- Collected data at the national level that allowed calculation of key demographic indicators
- Explored the direct and indirect factors that determine levels of and trends in fertility and childhood mortality
- Measured contraceptive knowledge and practice
- Collected data on key aspects of family health, including immunisation coverage among children, prevalence and treatment of diarrhoea and other diseases among children under age 5, and maternity care indicators such as antenatal visits and assistance at delivery
- Obtained data on child feeding practices, including breastfeeding, and conducted anthropometric measurements to assess the nutritional status of children under age 5 and women age 15–49
- Conducted haemoglobin testing with eligible children age 6–59 months and women age 15–49 to gather information on the prevalence of anaemia
- Collected data on women's and men's knowledge and attitudes regarding sexually transmitted infections and HIV/AIDS
- Obtained data on women's experience of emotional, physical, and sexual violence
- Gathered data on disability among household members

The information collected through the 2023 JPFHS is intended to assist policymakers and programme managers in evaluating and designing programmes and strategies for improving the health of the country's population. The survey also provides indicators relevant to the Sustainable Development Goals (SDGs) for Jordan.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

- Household
- Individual
- Children age 0-5
- Woman age 15-49
- Man age 15-59

Version

VERSION NOTES

The data dictionary was generated from hierarchical data that was downloaded from the The DHS Program website (<http://dhsprogram.com>).

- Contract Phase: DHS-VIII
- Recode Structure: DHS-VIII

Scope

NOTES

The 2023 Jordan Population and Family Health Survey covered the following topics:

HOUSEHOLD

- Identification
- Usual members and visitors in the selected households
- Background information on each person listed, such as relationship to head of the household, age, sex, marital status, survivorship and residence of biological parents, educational attainment, and birth registration
- Characteristics of the household's dwelling unit, such as the source of water for drinking and other purposes such as cleaning and handwashing, water source location and how long it takes to get water, type of toilet facilities and where it is located, type of fuel used for cooking, main source of light for the home, type of fuel or energy used for heating the home, number of rooms, ownership of livestock, and possessions of durable goods.
- Disability
- Child discipline

INDIVIDUAL WOMAN

- Identification
- Background characteristics (including age, education, and media exposure)
- Pregnancy history and childhood mortality
- Family planning, including knowledge, use, and sources of contraceptive methods
- Fertility preferences
- Antenatal, delivery, and postnatal care
- Breastfeeding and infant feeding practices
- Vaccinations and childhood illnesses
- Women's work and husbands' background characteristics
- Knowledge and awareness regarding HIV/AIDS
- Knowledge, attitudes, and behaviours related to other health issues (e.g., smoking)
- Early childhood development
- Domestic violence

INDIVIDUAL MAN

- Identification
- Respondent's background
- Reproduction
- Contraception
- Marriage and sexual activity
- Fertility preferences
- Employment and gender roles
- HIV/AIDS
- Other health issues

BIOMARKER

- Identification
- Weight, height, and hemoglobin measurement for children age 0-4 (0-59) month
- Weight, height, and hemoglobin measurement for women age 15-49

FIELDWORKER

- Background information on each fieldworkers

Coverage

GEOGRAPHIC COVERAGE

National coverage

UNIVERSE

The survey covered all de jure household members (usual residents), all women aged 15-49, men aged 15-59, and all children aged 0-4 resident in the household.

Sampling

SAMPLING PROCEDURE

The sampling frame used for the 2023 JPFHS was the 2015 Jordan Population and Housing Census (JPHC) frame. The survey was designed to produce representative results for the country as a whole, for urban and rural areas separately, for each of the country's 12 governorates, and for four nationality domains: the Jordanian population, the Syrian population living in refugee camps, the Syrian population living outside of camps, and the population of other nationalities. Each of the 12 governorates is subdivided into districts, each district into subdistricts, each subdistrict into localities, and each locality into areas and subareas. In addition to these administrative units, during the 2015 JPHC each subarea was divided into convenient area units called census blocks. An electronic file of a complete list of all of the census blocks is available from DoS. The list contains census information on households, populations, geographical locations, and socioeconomic characteristics of each block. Based on this list, census blocks were regrouped to form a general statistical unit of moderate size, called a cluster, which is widely used in various surveys as the primary sampling unit (PSU). The sample clusters for the 2023 JPFHS were selected from the frame of cluster units provided by the DoS.

The sample for the 2023 JPFHS was a stratified sample selected in two stages from the 2015 census frame. Stratification was achieved by separating each governorate into urban and rural areas. In addition, the Syrian refugee camps in Zarqa and Mafrqa each formed a special sampling stratum. In total, 26 sampling strata were constructed. Samples were selected independently in each sampling stratum, through a twostage selection process, according to the sample allocation. Before the sample selection, the sampling frame was sorted by district and subdistrict within each sampling stratum. By using a probability proportional to size selection at the first stage of sampling, an implicit stratification and proportional allocation were achieved at each of the lower administrative levels.

For further details on sample design, see APPENDIX A of the final report.

RESPONSE RATE

A total of 20,054 households were selected for the sample, of which 19,809 were occupied. Of the occupied households, 19,475 were successfully interviewed, yielding a response rate of 98%.

In the interviewed households, 13,020 eligible women age 15–49 were identified for individual interviews; interviews were completed with 12,595 women, yielding a response rate of 97%. In the subsample of households selected for the male survey, 6,506 men age 15–59 were identified as eligible for individual interviews and 5,873 were successfully interviewed, yielding a response rate of 90%.

Data collection

DATES OF DATA COLLECTION

Start	End
2023-01-02	2023-05-15

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

DATA COLLECTION NOTES

The DoS recruited and trained 200 people for the main fieldwork to serve as team supervisors, interviewers, and biomarker technicians. The training took place from 20 November to 24 December 2022 in Amman. The training course consisted of instruction regarding interviewing techniques and field procedures, a detailed review of questionnaire content, instruction on how to administer the paper and electronic questionnaires, mock interviews between participants in the classroom, and practice interviews with real respondents in areas outside the survey sample. The interviewer training also included presentations given by various specialists and experts from the Ministry of Health covering Jordan-specific policies and programmes on family planning, immunisation, and nutrition.

In addition, 34 individuals were trained on how to collect biomarker data, including taking height and weight measurements and testing for anaemia by measuring haemoglobin levels. The biomarker training was held from 4–24 December 2022 and consisted of lectures, demonstrations of biomarker measurement or testing procedures, field practice with children, and standardisation exercises. The training on child height measurement included standardisation exercises and restandardisation exercises for technicians who did not pass the initial standardisation exercises.

A field practice was organised to provide trainees with additional hands-on experience before the actual fieldwork. A total of 30 teams were formed for field practice. Each team consisted of a female supervisor, three female interviewers, one male interviewer, and one biomarker technician with academic qualifications in a medical field.

Fieldwork

Data collection took place over a 6-month period from 2 January to 15 June 2023. Fieldwork was carried out by 30 field teams, each consisting of one female supervisor, three female interviewers, one male interviewer, one biomarker technician, and two drivers. Electronic data files were transferred to the DoS central office in Amman every few days via SynCloud, a secure data transfer platform. Staff from the DoS and specialists from The DHS Program coordinated and supervised fieldwork activities.

questionnaires

QUESTIONNAIRES

Five questionnaires were used for the 2023 JPFHS: (1) the Household Questionnaire, (2) the Woman's Questionnaire, (3) the Man's Questionnaire, (4) the Biomarker Questionnaire, and (5) the Fieldworker Questionnaire. The questionnaires, based on The DHS Program's model questionnaires, were adapted to reflect the population and health issues relevant to Jordan. Input was solicited from various stakeholders representing government ministries and agencies, nongovernmental organisations, and international donors. After all questionnaires were finalised in English, they were translated into Arabic.

data_processing

DATA EDITING

All electronic data files for the 2023 JPFHS were transferred via SynCloud to the DoS central office in Amman, where they were stored on a password-protected computer. The data processing operation included secondary editing, which required resolution of computer-identified inconsistencies and coding of open-ended questions. Data editing was accomplished using CSPro software. During the duration of fieldwork, tables were generated to check various data quality parameters, and specific feedback was given to the teams to improve performance. Secondary editing and data processing were initiated in July and completed in September 2023.

data_appraisal

ESTIMATES OF SAMPLING ERROR

The estimates from a sample survey are affected by two types of errors: nonsampling errors and sampling errors. Nonsampling errors are the results of mistakes made in implementing data collection and in data processing, such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the 2023 Jordan Population and Family Health Survey (2023 JPFHS) to minimise this type of error, nonsampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in the 2023 JPFHS is only one of many samples that could have been selected from the same population, using the same design and sample size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability among all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

Sampling error is usually measured in terms of the standard error for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to calculate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic calculated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95% of all possible samples of identical size and design.

If the sample of respondents had been selected by simple random sampling, it would have been possible to use straightforward formulas for calculating sampling errors. However, the 2023 JPFHS sample was the result of a multistage stratified design, and, consequently, it was necessary to use more complex formulas. Sampling errors are computed using SAS programs developed by ICF. These programs use the Taylor linearisation method to estimate variances for survey estimates that are means, proportions, or ratios. The Jackknife repeated replication method is used for variance estimation of more complex statistics such as fertility and mortality rates.

A more detailed description of estimates of sampling errors are presented in APPENDIX B of the survey report.

DATA APPRAISAL

Data Quality Tables

- Household age distribution
- Age distribution of eligible and interviewed women
- Age distribution of eligible and interviewed men
- Age displacement at age 14/15
- Age displacement at age 49/50
- Pregnancy outcomes by years preceding the survey
- Completeness of reporting
- Standardization exercise results from anthropometry training
- Height and weight data completeness and quality for children
- Height measurements from random subsample of measured children
- Interference in height and weight measurements of children
- Interference in height and weight measurements of women
- Heaping in anthropometric measurements for children (digit preference)
- School attendance by single year of age
- Vaccination cards photographed

- Number of enumeration areas completed by month and governorate

See details of the data quality tables in Appendix C of the final report.

Access policy

General Inquiries	The DHS Program	info@dhsprogram.com
Data and Data Related Resources	The DHS Program	archive@dhsprogram.com

ACCESS CONDITIONS

Request Dataset Access

The following applies to DHS, MIS, AIS and SPA survey datasets (Surveys, GPS, and HIV).

To request dataset access, you must first be a registered user of the website. You must then create a new research project request. The request must include a project title and a description of the analysis you propose to perform with the data.

The requested data should only be used for the purpose of the research or study. To request the same or different data for another purpose, a new research project request should be submitted. The DHS Program will normally review all data requests within 24 hours (Monday - Friday) and provide notification if access has been granted or additional project information is needed before access can be granted.

DATASET ACCESS APPROVAL PROCESS

Access to DHS, MIS, AIS and SPA survey datasets (Surveys, HIV, and GPS) is requested and granted by country. This means that when approved, full access is granted to all unrestricted survey datasets for that country. Access to HIV and GIS datasets requires an online acknowledgment of the conditions of use.

Required Information

A dataset request must include contact information, a research project title, and a description of the analysis you propose to perform with the data.

Restricted Datasets

A few datasets are restricted and these are noted. Access to restricted datasets is requested online as with other datasets. An additional consent form is required for some datasets, and the form will be emailed to you upon authorization of your account. For other restricted surveys, permission must be granted by the appropriate implementing organizations, before The DHS Program can grant access. You will be emailed the information for contacting the implementing organizations. A few restricted surveys are authorized directly within The DHS Program, upon receipt of an email request.

When The DHS Program receives authorization from the appropriate organizations, the user will be contacted, and the datasets made available by secure FTP.

GPS/HIV Datasets/Other Biomarkers

Because of the sensitive nature of GPS, HIV and other biomarkers datasets, permission to access these datasets requires that you accept a Terms of Use Statement. After selecting GPS/HIV/Other Biomarkers datasets, the user is presented with a consent form which should be signed electronically by entering the password for the user's account.

Dataset Terms of Use

Once downloaded, the datasets must not be passed on to other researchers without the written consent of The DHS Program. All reports and publications based on the requested data must be sent to The DHS Program Data Archive in a Portable Document Format (pdf) or a printed hard copy.

Download Datasets

Datasets are made available for download by survey. You will be presented with a list of surveys for which you have been granted dataset access. After selecting a survey, a list of all available datasets for that survey will be displayed, including all survey, GPS, and HIV data files. However, only data types for which you have been granted access will be accessible. To download, simply click on the files that you wish to download and a "File Download" prompt will guide you through the remaining steps.
