STUDY TYPE

Individual Food Consumption/Dietary Survey [hh/ifcs]

ABSTRACT

The objectives were to:

- Identify nutritional problems, severity and distribution according to regions/areas and socio-economic factors.
- Assess food consumption according to population demographic characteristics.
- Identify population groups with malnutrition deficiency or excess.
- Elaborate nutritional mapping according to the action plan adopted by all the countries, including Tunisia, at the World Food Summit in Rome in 1996.
- Identify vulnerable population groups in food insecurity situation by carrying out a causal analysis of the factors affecting their nutritional status.
- Realise a comparative analysis with the 1973-75 survey to know the changes and trends in nutritional status.
- Identify regions at risk to optimize and target intervention programs.
- Create a database for the planning, surveillance, monitoring and evaluation of nutritional interventions.

Scope

NOTES

The survey collected information on:

- Subjects: information on the participants such as age, sex and geographical location.
- Consumption: information on all foods consumed by each participant in each survey day, including quantities and nutrient values.

Coverage

Sampling

SAMPLING PROCEDURE

It was a cross-sectional health study providing a large nationally representative sample of the Tunisian population and was conducted in 1996 and 1997. The sample of the survey was selected to be representative of the whole country. It was a random sample stratified at two levels (by district and then by household), taken from the database of the population, and lodging census that was carried out in 1994. At baseline, 1800 households situated at 300 districts of 6 households each were included.

WEIGHTING

Total households in stratum (S) = N

Size of a sample district (Di), is equal to Ni

Number of sample districts for stratum (S) = n

In the first degree;

Probability of selection randomly the district (Di) in the stratum (S) = $(n \cdot Ni) / N$

In the second degree, 6 households were random selected per sample district;

Probability of second degree random selection = $6 / Ni$

Definitive sampling rate by stratum $((n \cdot Ni) / N) \cdot (6 / Ni) = (6 \cdot n) / N$

Raising coefficient for the district (Di) is equal to $N / 6n$

DATA COLLECTION NOTES

In this study, dietary intake was assessed using a 3-day food record (two weekdays and one weekend day) to collect the types and amounts of the meals, foods and beverages consumed. Trained dieticians visited the selected households to give participants detailed information about the objectives and the process of the survey, and instructions on how to record the amount of foods consumed using household tableware. Dieticians insist on the respondents not changing their eating habits.

The first step of the 3-day food record was self-administered by the subjects at home. The day of the survey, dieticians reviewed unclear descriptions, errors, omissions, or doubtful entries in the filled pre-printed form and asked the participants to clarify them. For each dish, a list of ingredients, the estimated weight of the raw edible portion and method of preparation were collected from the women in charge of food preparation. We asked for the state of the food consumed (as purchased, raw edible part, cooked edible portion). The accuracy of portion size of consumed foods was checked using photos of food portions and known weight/specific portions.

CONFIDENTIALITY

The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be reported immediately to FAO

ACCESS CONDITIONS

Micro datasets disseminated by FAO shall only be allowed for research and statistical purposes. Any user which requests access working for a commercial company will not be granted access to any micro dataset regardless of their specified purpose. Users requesting access to any datasets must agree to the following minimal conditions:

- The micro dataset will only be used for statistical and/or research purposes;
- Any results derived from the micro dataset will be used solely for reporting aggregated information, and not for any specific individual entities or data subjects;
- The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be reported immediately to FAO;
- The micro dataset cannot be re-disseminated by users or shared with anyone other than the individuals that are granted access to the micro dataset by FAO.
