		..\Sasprogs **\File_creation**	ni92f_creadas.sas	This SAS syntax file contains the definitions of new variables based on variables in the questionnaire. This file contains the following variables that are needed to weight the data: *STRATAWT - defines the relative weights assigned for each stratum in the sample.* *PESOMEF - weight variable that **should be used in all calculations for women with a completed interview**, which takes into account the strata weight and the number of women of reproductive age in the household (only one woman 15-49 was selected per household).*

	PESOHIJO	*- another weight variable to be used for analyses on variables collected for just one randomly selected child under 5 (__Use in questions 362 thru 384 in the questionnaire__). Using this weight gives results that are representative of all children under 5 (it compensates for unequal probabilities of selection).*
	ni92f_haga_hijo.sas	This is a SAS syntax file that reads from "ni92f_creadas.sas7bdat" and creates the SAS dataset "ni92f_hijos.sas7bdat", which contains one record for each live birth in the births history.
